1. What Is Economics?

People often think that economics is boring and only about money.

But some of us want to make a world where everyone has what they need to survive.

1. What do you think economics is about?

What is Economics?
Economics is about the things that people need and want. It is about the production (making), distribution (dividing up and transporting) and consumption (using) of these things. Economics looks at four main issues:

1. What things to produce, and how many.
2. How to produce them.
3. Who will receive them.
4. How much they should cost.

Ma Ma’s Cakes
Ma Ma decides to start a cake business because she knows people like to eat good cakes.

1. What are the cakes made of?
Flour, sugar and eggs.

2. Where are the cakes made?
In Ma Ma’s cake factory.

3. How are the cakes distributed?
They are taken in vans to small shops.

4. Who eats the cakes?
Everybody!

Pairwork
2. Can you see production, distribution and consumption in the pictures above? Draw a similar economic map for another product.
2. Needs and Wants

**Groupwork**

1. You are lost at sea. The boat you are travelling on arrives at an island. There are no other people or buildings on the island. What do you need to survive? What are your basic needs?

In groups, write your ideas in the box below.

What we need on our island:

Needs are things that you must have to survive. For instance, if you did not have water, you would die. When people live together (in communities and societies), education, healthcare and safety become basic needs.

But people often want a lot more than their basic needs. Many people want nice clothes, big houses, new cars, televisions, cigarettes, and many more things. Often, the more people have, the more they want.

**On Your Own**

2. You won a lot of money yesterday. You are now very rich and can buy anything you want. What will you buy? Write a short list. How many of these things do you need to survive?

In today’s world there are huge differences between what some people have and what other people don’t have. In economics this is called ‘wealth inequality’. About 1.1 billion people around the world live on less than US$1 per day. Many of these people find it difficult to supply their basic needs of food, water, and housing. Nearly 11 million children die before their fifth birthday because of poverty, and about 800 million people go to bed hungry every day. While the poorest 50% percent of the world’s population own just 1% of the world’s wealth, the richest 10% own 85%.

**Discussion**

3. Goods & Services

Brainstorm

1. Do you know what **goods** and **services** are? Can you think of any examples?

Needs and wants are either **goods** or **services**. In economics, a **good** or a **service** is sometimes called a **commodity**.

A. **Goods are things you can touch** like pens, longyis, rice, books, charcoal, computers, mobile phones, animals, etc.

B. **Services are things that people do for you, or you do for other people**. They are things you can’t touch, like education or healthcare. When you go to the clinic or the hospital, a doctor or a medic examines you and does tests. This is a **service**. When you go to class, a teacher is giving you a **service**: teaching a lesson. When you buy a cup of tea in a teashop, you are not only buying tea, water and milk (**goods**). You are paying for the **services** of sitting in the teashop, of someone making the tea, bringing it to you and cleaning your cup when you finish.

Pairwork

2. In pairs, develop two presentation posters, one for a new kind of **good**, and one for a new kind of **service**.

For the **good** you need to show:
- the name
- what it looks like - pictures!
- what it does
- the cost and why people should buy it

For the **service** you need to show:
- what the service provides
- who will want to use it and why
- how much it costs

Discussion

3. What about goods and services in your community? Which goods and services are the most important? Why?

Pairwork

4. Do you know how goods reach your community? Choose three different **goods** and ask different members of your community where the good came from and how they obtained it. Write a short report about it.
4. Scarcity & Choice

1. Scarcity of goods and services

On Your Own

1. Make a list in your book of ten goods and/or services that you want. Why do you want these things? What stops you from getting your wants?

There are never enough resources to produce goods and services to meet people’s wants. This is the problem of scarcity.

Things are scarce because human wants are greater than the resources available. Resources are limited; wants are unlimited. Often when people get what they want, they find new wants. This happens if they are rich or poor.

Groupwork

2. What do you think causes scarcity of goods (and services)?

Pairwork

3. How about goods and services in your community? What goods and services are scarce and why? In pairs, interview three people in the local community about scarce goods and services.

2. Choice

On Your Own

4. Often in our lives we need to make choices about goods and services. Think about these questions:

a. Your teacher gives you 20 baht. What will you buy?

b. Your school only has enough bamboo to build one building. What should you build?

c. You are a member of a community weaving project. You have a limited amount of wool. What should your produce - bags, blouses, longyis - and how many?

These choices are made by everyone in society at all levels:

Example 1: Htay Htay is at the market. She needs to make a choice between 1 kilo of pork or 5 kilos of yellow beans. She doesn’t have enough money for both.

Example 2: The town committee needs to choose between a new building for the hospital or a new building for the primary school. They only have enough materials for one building.

Example 3: The government needs to make a choice between supplying fuel for their aeroplanes, or providing fuel to farmers for the harvest. They only have enough fuel for one of them.

Discussion

5. What kinds of economic choices are made in your community?
1. As a class make a list of goods and services in your community which are scarce. As a group, have a look at your list. Decide together which of these scarce goods and services you think is the most important. Once you have made your choice, prepare a short presentation explaining:

a. Why it is so important.
b. Why this good or service is scarce.
c. What could be done to improve the situation.

People, communities and governments all need to make choices about which services are the most important. They must find a balance between what they want, and what they can obtain.

2. Which resources do you think will be the most scarce in the world in the future? What kinds of choices will people have to make?

3. You are members of the Government Transport Committee of Mazalia. The committee has $250 million to spend on transport this year. In the box below, you will see four groups, each with a different suggestion about how to spend government money. The Prime Minister has asked the Committee to agree on one of the suggestions only.

Your teacher will tell you which group you support. During the Transport Committee meeting, your group must try and persuade the Committee that your idea is the best one. Once every group has spoken, there will be a vote, but you can’t vote for your own group’s idea.

**Group 1:**
‘We say the roads should be repaired around the country because they are dangerous. There are many car accidents, and travel is too slow.’

**Group 2:**
‘Many of the villages in the country do not have bus services. We want the government to spend the money on more buses so the people can travel more easily.’

**Group 3:**
‘The roads in our country are very crowded now. We think that the money should be used to build railways, which we do not have. Trains can carry lots of people and goods, and are usually faster than road transport.’

**Group 4:**
‘We need a larger airport so that we can increase trade with people from other countries, and can encourage tourism.’

4. Do you agree about the choices made about services in your community? If you were community leaders, what changes would you make?
5. Money & Barter

Pairwork

1. What is money? How would you define the word ‘money’?

Discussion

2. Why is a US$50 note more valuable than a notebook? A notebook has perhaps 50 times more paper in it than a $50 note.

National money is sometimes called a currency. An example of a currency is the Burmese Kyat.

Brainstorm

3. How many other world currencies can you name?

Exchange Rates

There are many different currencies in the world. Each currency has a different value in relation to other currencies. These values change all the time. For example, in May 2007, US$1 was worth approximately:

<table>
<thead>
<tr>
<th>Currency</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>33 Baht</td>
<td>1250 Kyat (unofficial rate)</td>
</tr>
</tbody>
</table>

Different things used as money

Money is very important for every country in the world. The things that people use as money change as we move through different countries in the world, and different periods of history. People have used coins, metal rods, shells, cloth, stones, feathers, weapons, and teeth.

Yap Stone Money

The states of Yap consist of four islands in Micronesia, an archipelago (group of islands) near Indonesia. Traditionally, the people of Yap used circular stones with holes in the middle as money. They call them ‘rai’. Some of these stones are huge, with diameters up to four metres. Their value is based on their size and their history. There are about 6800 stones around the island. This stone money can still be legally used in Yap, though usually people use US dollars. Many people keep Yap stones outside their house to show people that they are wealthy.

Discussion

4. Is money important in your community? Why? What is it used for? What different kinds of things are used as money in your community?
The History of Money

In the Beginning: Barter
In barter, money is not used. Goods and services are exchanged directly with one another. It may date back to the beginning of humankind.

9000 — 6000 BCE: Livestock
Livestock, which include anything from cows, to sheep, to camels, are the first and oldest form of money. When farming became widespread, people began to barter with grain and other plant products.

1200 BCE: Shells
The first use of shells was in China. Historically, many societies have used shells as money, and even as recently as the middle of this century, shells have been used in some parts of Africa. The shell is the most widely and longest used currency in history.

1000 BCE: First Metal Money
Bronze and Copper shells were made in China in about 1000 BCE and are considered some of the earliest forms of metal coins. Metal tool money, such as knife and spade monies, was also first used in China.

806 BCE: Paper Currency
The first paper money appeared in China. In all, China experienced over 500 years of early paper money, from the 9th to the 15th century BCE. Then beginning in 1455 CE, the use of paper money in China disappeared for several hundred years.

500 BCE: Modern Coins
Outside of China, the first coins were just lumps of silver. They soon became round coins, and were stamped with the pictures of various gods and emperors. These early coins first appeared in Lydia (now part of Turkey), but were soon copied and used in many other parts of the world. These new coins were made from precious metals such as silver and gold.

The Present:
Today, currency continues to change and develop, such as the new polymer plastic money like the Thai 50 baht banknote. Electronic money is becoming popular with the use of plastic credit cards, microchips and the internet. This means that people don’t have to carry so much paper money with them.

Pairwork 1. True or false. Complete the exercise that your teacher gives you.

Pairwork 2. Timeline. Complete the exercise that your teacher gives you.
What is money used for?
Money has four basic purposes in an economy:

1. **EXCHANGE**
   Money can be exchanged for all goods and services. For instance 20 baht is exchanged for a kilo of mangoes, or ten limes, or a bowl of mohinga.

2. **TO STORE VALUE**
   In most economies, money keeps its value over time. If you have a 500 baht note, you are fairly sure that the value will not change much in the near future.

3. **TO MEASURE VALUE**
   Money is used to measure differences in the value (price) of all goods and services.

4. **TO BORROW AND PAY BACK DEBT**
   Debt is when someone owes money. Because money keeps its value over time, people can borrow it (a loan) and pay it back in the future.

The advantages of money over barter

2. Imagine that you are a fisher. You live in a village near a river. The village has a barter economy - there is no money. Goods and services are exchanged for other goods and services. Have a look at what happens to you during the week. How would money change your situation?

**Monday:**
Today is a bad day. You don’t catch any fish. You have nothing to exchange at the market. You caught some fish yesterday, but exchanged them all immediately because the weather is hot and the fish spoil quickly and lose their value. You have no food left from yesterday, so you go hungry.

**Tuesday:**
Luckily you catch some fish today. You go to the market to exchange them for tomatoes. The tomato seller offers you 2 kilograms of tomatoes. You tell her that it is a big fish, and should be worth 3 kilograms of tomatoes. You have an argument with her. Finally you decide to go to another seller.

**Wednesday:**
Today you catch lots of fish. You decide to buy potatoes at the market. Unfortunately the potato seller doesn’t want any fish, he wants garlic. You find the garlic seller, exchange the fish for the garlic, and then return to the potato seller to exchange the garlic for potatoes.

**Thursday:**
You decide to go on a trip today to your parents’ village. You need to take enough fish with you to pay for the bus ride, to buy food along the journey, and to give a present to your parents. The basket of fish that you have to carry with you is very heavy.

**Friday:**
Your net breaks today. You need a new one. You don’t have any fish to barter with the woman who makes nets. You ask your friends, but they have not caught many fish today, so they can’t give you enough for a new net.
Money better than barter?
Just because money has some advantages over barter does NOT mean that barter is a bad idea. Barter is still used as a means of exchange all over the world. Often barter and money are used together in communities. For some things barter is useful, for other things money is useful.

Pairwork 1. Have a look at the examples below and decide whether a cash economy or a barter economy is more suitable. Write MONEY or BARTER in the box provided. Give reasons for your choices in a class discussion. Which kind of economy is better for your community? Money or barter? Why?

a. Lerr Bwe lives in a refugee camp on the Thai-Burmese border. She repairs clothes. The camp is far from any villages and towns, and so not many people have jobs. Also, there is not enough land to grow crops to sell.

MONEY OR BARTER?

b. Su Su lives in a village near Mae Sariang. She catches fish in the river and travels to the town every day to sell them to the restaurants.

MONEY OR BARTER?

c. Saw Moses lives in a small town in Burma. He helps people build their houses. The problems in the economy mean that the kyat is very unstable and rapidly losing its value. Many people in the town are in debt.

MONEY OR BARTER?

Discussion 2. When is barter most useful? What kind of communities benefit from barter?

Bartering in modern business
Barter is still used today by businesses. One good example is the company Bartercard, started in 1991, which has created a bartering network between companies. The Bartercard system now operates in 13 countries around the world. A company can give goods or services to another company in the Bartercard network. They then earn ‘trade dollars’ which are stored on a plastic card a bit like a credit card. They can use these ‘trade dollars’ later to receive goods and services that they need from another company. The ‘trade dollars’ system allows companies to decide what they want, and when they want it, rather than having to do a direct exchange. They do not need to use money.
Kud Chum is a rural district in Northeast Thailand. In the 1990’s, many villagers were in debt and were becoming dependent on banks and price changes over which they had no control, particularly the price of rice, their most important crop. Many young people left the area for jobs in Bangkok.

In 1998, members of five villages in the area decided to try to become more self-sufficient. They set up a community currency program.

They called their new currency Bia Kud Chum. Bia means ‘young tree’ in Isan, the language of Northeastern Thailand. They chose that name because they wanted their community to grow strong like a tree. The community set up the ‘Bia Bank’. Every person who opened an account at the ‘bank’ received 500 Bia.

The aim of the Bia was to keep money in the community and reduce villagers’ dependence on the Thai baht. The Bia could only be used in the five villages in the district. Every Saturday, one of the villages would hold a market. Villagers could buy anything using either Bia or Thai Baht or both, but could not exchange one for the other. The Bia was organised by the community for the community. It was managed by a committee of people elected from the five villages. They also had a bank. Every community member could borrow up to 500 Bia without paying any interest.

The community started using Bia in March 2000. In that month, police, military, local government, and the Thai Central Bank visited the villages to investigate the Bia. By April 2000 the government forced Bia Bank to close. They said it was illegal. Some of them thought the Bia was dangerous to Thai security. Some of them thought the villages wanted to be an independent country.

The community continued to struggle for their right to use the Bia. A new five year project has now been launched under the name ‘Boon Kud Chum’, covering fifty communities in the district.
On Your Own

1. Bia Kud Chum. Answer the following questions in your notebooks.
   1. Why did the villagers in Kud Chum district decide to create the Bia?
   2. What are the advantages of a community currency like the Bia?
   3. Why was the Thai government against the Bia?
   4. Should the community be allowed to use Bia? Why / Why not?

Pairwork

2. Interview five adults in your community. How often do they barter for things, and how often do they buy or sell things with money (cash). When and why do they use cash or barter? Do they use different systems for different goods and services? Write a short report about your findings and present it to the class.

Debt, Loans & Interest

**Debt** is when you owe money. If you borrow money from someone, the money they give you is called a **loan**. So if your friend gives you a loan of 100 baht, you are 100 baht in debt. When you borrow money from other people, or a bank, you usually have to ‘buy’ that money from them, i.e. pay them a small amount of money each week or month so that you can borrow the larger amount. These payments are called **interest**. Interest is usually calculated on a yearly basis, as a percentage (%) of the amount of money borrowed.

For example if you borrow 10,000 baht at 9% interest, you will pay 900 baht each year to borrow the money \((9/100 \times 10,000 = 900)\). Therefore, every month you will pay 75 baht interest \((12 \text{ months} \times 75 \text{ baht} = 900 \text{ baht})\).

Because of interest, being in debt can be expensive. Most people who borrow money do so because they do not have any money. Therefore, paying interest can become a serious problem.

**Foreign Debt**

Countries, like people, also get into debt. When they borrow money from other countries or foreign banks, it is called **foreign** debt. Poor countries usually have to borrow more money than richer countries, and find it more difficult to pay the interest, and repay the loan. From the 1960’s onwards, many poor countries (sometimes called ‘Third World’ or ‘developing’ countries) borrowed money from rich countries, thinking that interest rates (levels) would stay low. In fact, they increased. Now these poor countries spend huge amounts of money on repaying the interest on their debt.
The developing world now spends US$13 in interest repayments for every $1 of aid received. In 1970, the world’s poorest countries owed $25 billion in debt. By 2002, they owed $523 billion. Much of the debt is owned by the world’s seven richest countries: USA, Japan, Germany, Britain, France, Italy and Canada.

The effect of debt on poor countries
Poor countries often have to take money away from health and education programmes to pay the interest on their debt. For example, Zambia, in Africa, spends twice as much money repaying foreign debts as it spends on healthcare. At least 11 million children die each year around the world due to poverty caused partly by the debt crisis. The burden of debt damages poor countries’ development. They are unable to improve their transport systems, education, healthcare, etc. because of the huge debt repayments.

What can be done?
There is a lot of international pressure on rich countries, the IMF and the World Bank to cancel the debts of the world’s poorest countries. In June 2005, the world’s richest countries (known as G8) agreed to cancel US$40 billion of debt for 18 countries, mainly in Africa. This will save US$1.5 billion a year in interest payments. However, this is only 7% of the total debt of poor countries. The G8 countries also promised to double the amount of aid they give to Africa by 2010. Rock stars and activists Bono and Bob Geldof recently criticised some G8 countries for being too slow to start paying the money they had promised.

Burma’s foreign debt
In 2005, Burma’s foreign debt was estimated to be around US$7bn. The World Bank stopped lending to Burma in 1987 due to the country’s failure to start economic, and other, reforms. However, the country has received some loans and debt relief from China, Japan and India.

1. Think of three questions about the paragraphs of text above.
2. Many people say that the debts of poor countries are unfair. Have a look at the statements below. Do you think it is fair that these countries should have to repay their foreign debt? Why? Why not?
   • Some debts were passed on when countries achieved independence from colonial rule.
   • In many cases, loans were given to dictators or corrupt leaders.
   • Poor countries cannot repay their debts. In 100 years their debt will have increased to around US$13,780,000,000,000. This is $3.5 million for every person in the Third World.
3. True or false. Complete the exercise that your teacher gives you.

Bono and Bob Geldof
6. Price

A **price** is how much something costs. The price of 1kg of oranges is about 20 baht.

**Discussion**

1. Can you think of any free goods and services? Why are they free?

**Prices and competition**

In most economies, prices are set by **competition**. Economic competition is the relationship between people who sell the same, or similar, kinds of goods and services, and between people who want to buy them. There are **three** important kinds of competition that control prices:

1. **Seller vs. Seller**

   In Huay Lin town there are three food shops. They are in competition with each other to attract **customers** (people who want to buy the food).

2. **Buyer vs. Buyer**

   Huay Lin town has many businesses that want to buy petrol (gas). A limited amount of petrol is delivered to the town each month, so the businesses must compete with each other to obtain petrol.

3. **Seller vs. Buyer**

   Wa Aung at Style Clothes shop in Huay Lin town is trying to sell a new jacket for 300 baht. His customer only wants to pay 200 baht.

**Discussion**

2. Can you think of examples of these three kinds of competition in your own community? How do you think these kinds of competition affect prices?

**Pairwork**

3. Interview someone in your community who sells goods or services. How do they decide on their prices? Do their prices change? Why/Why not? How much do they negotiate prices with buyers? Make notes about their answers. Prepare a brief presentation on the interview to give to the class.
7. Supply and Demand

Supply & Demand is probably the most important part of economic theory. It affects most of the things that happen in a free economy.

- Supply is the amount of goods or services available.
- Demand is the number of people that want the goods and services, and the amount that they want.

I WANT TEN MORE SWEETS!!!

You ate most of the sweets yesterday. I only have three left.

Groupwork
1. Can you think of any goods or services in your community where demand is greater than supply? Can you think of any goods or services where supply is greater than demand? Make two lists. Can you explain why?

Pairwork
2. Answer the questions below.

a. In January, Style Clothes in Chiang Mai had 40 jackets and 200 buyers. Which is greater, supply or demand? Will the price of each jacket be high or low? Why?

b. In May, Style Clothes had 80 jackets and 30 buyers. Which is greater, supply or demand? Will the price of each jacket be high or low? Why?

On Your Own
3. Have a look at the picture on the right. What is this picture saying about Supply and Demand?

Who do you think will win the contest? Which force is stronger in a free economy, supply or demand?
Factors Affecting Demand

1. **The price of a commodity (a good or a service)**
   If the price is reduced, demand will probably rise. If the price is increased, demand will probably fall.

   *Q.* The price of mangoes in Mae Sot rises from 20 to 100 baht per kilogram in one week. Does the demand for mangoes rise or fall? Why?

2. **The income (wages) of consumers**
   The more that people earn, the more they can afford to buy. Therefore, if people earn more, demand will probably increase, but if they earn less it will probably decrease.

   *Q.* Ma Aye Aye is a teacher in Nu Po. She loves chocolate, but her salary is small and she can’t afford to buy much. One day she is promoted to headmistress, and her salary increases. Does she buy more or less chocolate now? Why?

3. **The demand for substitute commodities (goods and services)**
   If an alternative commodity becomes available, which is better and/or cheaper, people may decide to buy it. So, demand for the first commodity will decrease.

   *Q.* Myint Thu lives in Mae Sot. He has a stall in the market selling sandals. One day another stall in the market starts to sell sandals also. However, the sandals in the other stall are stronger and cheaper than Myint Thu’s. After a few weeks, what happens to the demand for Myint Thu’s sandals? Why?

4. **The demand for other commodities at the same time**
   Consumers have a limited amount of money to spend. If they decide to buy more of one commodity at a particular time, they will have less money to spend on other commodities. Therefore, demand for these other commodities will decrease.

   *Q.* Tun Tun lives in Taungoo. He is a farmer. He works on his farm with his wife and his three sons. Most months, Tun Tun spends most of his money on sweets for his grandchildren. In May, he decides to buy rubber boots for the rainy season. Does he spend more or less money on sweets in May? Why?

5. **Whether people like the commodity**
   People may like a commodity for a certain period of time, but then decide they don’t like it, and stop buying it. Therefore, demand for that commodity falls.

   *Q.* Yin Twe has three children. They like bananas. She always buys lots of them at the market. One day her children tell her that they don’t like bananas anymore, but prefer oranges. What does Yin Twe buy the next time she goes to the market? Why?
Factors Affecting Supply

Groupwork
1. Can you think of things (factors) that might affect Supply?

On Your Own
2. Look at the points below and decide on the answers to the questions.

1. **The price of a commodity**
   The higher the price of a commodity, the more producers want to supply, because they will make more money.

   *Q. Thet Win owns a factory in Mandalay making umbrellas. In June, the price of umbrellas rises because the rainy season begins and more people want them. Does Thet Win decide to supply more or fewer umbrellas to the market? Why?*

2. **The cost of making a good**
   If a commodity is very expensive to make, producers will not make so many.

   *Q. Lam Mu lives in Rangoon. She makes two kinds of jewelry - cheap bracelets made of silver, and expensive rings made with gold and precious stones. Many people have enough money to buy the bracelets, but only a few people have enough money to buy the rings. Does she make more rings or bracelets? Why?*

3. **The supply of alternative goods that the producer could make with the same resources (Competitive Supply)**
   A producer may decide that it is better to produce a different good with his/her resources.

   *Q. Mahn Mahn owns a forge near Mawlamyine. He makes iron farming tools. One day he decides to produce spare parts for cars as well, as many of the cars in Mawlamyine are old and need regular repair. What happens to the number of farming tools he produces when he starts making car parts? Why?*

4. **When the production of one good affects the supply of another (Joint Supply)**
   If beef supply rises, so will leather supply (more cows will be slaughtered).

   *Q. Ye Min owns a chicken farm in Lashio. She sells eggs and meat from the chickens. Demand for eggs is high, so she decides to buy 25% more chickens and produce more eggs. What happens to the amount of chicken meat she supplies? Why?*

5. **Unexpected events**
   Strikes, natural disasters, war, international disputes etc. can all affect supply.

   *Q. Eh Moo Ka Baw lives in a village in Karen State. The villagers grow rice on the land near the village. Sometimes, soldiers from the Burmese Army come and destroy the crops or take them away. What happens to the supply of rice in the village? Why?*
Price, Supply and Demand

The graphs below show the relationship between price and supply & demand for oranges.

1. Can you explain how the two graphs work?

Advertising and Demand

Advertising is the process of making people aware of goods and services, persuading them to believe certain things about their quality, and persuading them to buy them. Well-known products are often more expensive than lesser-known ones, even though the product may be very similar.

2. Can you think of any famous brands of goods (products)? Do you think these products are better than other brands? Why?

3. Have a look at advertisements some newspapers and magazines. What are they telling you? Find one good example to show the class.

4. If you buy Nike shoes or clothes, they are likely to be more expensive than other ones, even though they are very similar. Why? Can you see any advertising on the shirt of footballer Ronaldinho? Why do you think a company wants to advertise on his shirt?

5. Where do you see advertising in your community? Do you think advertising works? Why? Why not?

6. Create a magazine advertisement for a good or service in your community. The aim of the advertisement is to increase demand. Present your advertisement to the class.
8. Inflation

**Brainstorm**
1. Do you know what the word ‘inflation’ means. What do you think is the connection with prices?

**Discussion**
2. Think of the most popular goods and services in your community. Over time, do the prices of these goods and services tend to go up or down? Why?

**Pairwork**
3. In pairs, ask people in your community about the prices of common goods and services (e.g. food, clothes, transport) over the past five or ten years. Have prices increased? Record their answers and write a short report.

*Inflation* is the general rise of the cost of goods & services. We only talk about inflation if there is a rise in prices for many goods and services. So if chicken is suddenly more expensive, but other goods and services are not, it is not inflation. Inflation is measured over a period of time.

Alternatively, if the prices of goods and services fall, it is called *deflation*. Deflation is quite rare.

**Measuring Inflation: The Consumer Price Index (CPI)**
To measure inflation, many governments in the world have a *Consumer Price Index (CPI)*. The CPI measures the average change in prices of a ‘basket of goods and services’ over a period of time. The basket contains common goods and services including food, clothing, housing, household goods, alcohol, tobacco, transportation, medical care and education.

**The ‘Base Year’**
For the CPI, inflation is measured using a ‘base year’ which is given the value 100. Inflation is calculated in relation to the base year, using per cent.

For example, in Thailand the base year is 2002, so 2002 is given 100 points. In 2003, the prices of all commodities rose an average of 1.8%, so the CPI for rice in 2003 is 101.8 points (i.e. the base year value of 100 plus 1.8).

*On Your Own*
1. Have a look at the example below. Answer the questions.

Imagine a society in which there are only two commodities: Oranges and Dollars. Both these commodities are finite - there is a limited supply of them.

Year 1: There are 10,000 oranges and 5,000 dollars. Therefore there are 2 oranges per dollar.

Year 2: There is very little rain, so the orange trees only produce 5000 oranges. The number of dollars (5,000) stays the same. Now there is only one orange per dollar.

Question 1: What will happen to the price of oranges? Why?

Year 3: The weather is perfect for oranges, so the number of oranges increases to 15,000. The number of dollars (5000) stays the same. Now there are 3 oranges per dollar.

Question 2: What will happen to the price of oranges? Why?

Year 4: The orange harvest is normal and 10,000 oranges are produced. However, the Central Government decides to print more money. There are now 10,000 dollars in the economy, so one orange per dollar.

Question 3: What will happen to the price of oranges? Why?

2. What things do you think can cause inflation? In your groups make a list. Look at the situations A, B and C below to help you. It might be helpful to think about supply and demand.

A. Aung Kyaw repairs motorbikes. He has a small shop in Sittwe. He used to buy spare parts from a factory in Sittwe but last month the factory closed. Now he has to buy them from Yangon, but delivery is slow and his new suppliers cannot send him enough parts. There is a shortage of spare parts. Aung Kyaw raises prices for two reasons: his customers agree to pay more because spare parts are hard to find, and he doesn’t want to lose money because he is selling fewer parts now.
B. Hsa Hsa works in a chocolate factory in Bangkok. The factory makes a chocolate bar called ‘Yum!’ which sells for 10 baht. Nearly all the workers in the factory are members of a labour union. Recently the union successfully negotiated an 8% wage increase from the factory. The factory raises the price of ‘Yum!’ to 11 baht so that they don’t lose money.

C. In Mazalia last year the orange harvest was bad. The price of oranges has risen because oranges are scarce. Tun Oo, the new Economy Minister, meets the National Union of Orange Workers. They demand a wage rise because they cannot afford to buy much orange juice any more. Tun Oo talks to the orange companies, and they agree to increase wages by 5%. However, the orange companies raise the price of orange juice by 6% to avoid losing money. The orange workers go on strike, and Tun Oo is fired. His replacement, Naw Shee Nay, persuades the orange companies to raise wages by 5% again. On Friday, the orange companies raise prices again...

D. In Southeast Asia in 1997 and 1998 there was an economic crisis. Foreign investors lost confidence and started to remove their money. Southeast Asian economies had borrowed a lot of money, particularly US dollars, to support growth. As investors lost confidence, the value of the Thai baht against the US dollar and other world currencies began to fall quickly. As the baht became less and less valuable, prices in Thailand began to rise rapidly.

**Effects of Inflation**

In a healthy, balanced economy, prices should rise slowly (2-3% per year). Inflation is only seen as a bad thing if prices rise too fast.

Read the five examples presented below. Check that you understand the vocabulary and meaning.

**Example 1:** Ma Win lives in Pa-an. She has a small restaurant. Last year she started saving money to pay for her daughter’s university education. Now, with high inflation, she sees that the money in the bank is losing its value. She decides to take the money out of the bank and buy a new fridge and cooker for the restaurant before they become too expensive.
Example 2: Khun Myo is retired and lives in Pa-an. He used to work in the civil service and receives a pension of 10,000 kyats per month. The pension increases by 2% each year. He also has a small teashop which makes him an extra 30,000 kyats per month. Due to the country’s economic problems, prices are rising 20% per year. Khum Myo can buy less and less with his pension. Less people come to his teashop because he raised prices. Everyone is using their money to buy gold jewellery until inflation slows down.

Example 3: Ma Myint lives in Lashio. She has a small factory producing soap. She employs eight people in the factory. Due to high inflation, the factory is now selling 30% less soap than the year before. People are buying less soap, and cheaper brands. Ma Myint had to increase the price of her soap by 10% last month because the materials she needs are now more expensive. She has also borrowed a lot of money to keep the business open, but she is worried about how she will repay the money if the situation does not improve. She has decided to ask four of her employees to leave next month because she can no longer afford to pay them, and thinks she will probably be forced to raise prices again.

Example 4: Nang Bo lives in a village near Mae Hong Son. The village has one tractor which all the farmers use. It is very important for their work. Unfortunately, last week the tractor broke down, and it is not possible to repair it. Nang Bo asks all the farmers in the village to pay some money towards a new tractor. However, because of high inflation, they have spent all their extra money before the things they needed became more expensive. This means that they have no money to invest in the tractor, and won’t be able to produce so much food this year.

Example 5: Aung Hein runs a shoe factory in Mandalay. He exports his shoes to Thailand, India, and Singapore. He is successful because he makes shoes very cheaply. Recently however, because of high inflation, he was forced to increase his prices. Wages, and the price of rent and materials, are increasing every month. Soon his international customers start saying that they don’t want to buy more shoes from him because they are too expensive. They can buy them more cheaply from China and Vietnam. The next time he goes to the market, he sees that the shoe stalls are selling shoes from China and Cambodia and that they are cheaper than the shoes from his factory. The shops in the market begin to reduce the number of shoes that they order from him. Soon he is forced to ask half of his staff to leave.
Pairwork

1. Look at the effects of inflation in each scenario. Look at the statements below and decide which one(s) is/are true for which scenario.

Put a cross in one or more boxes for each of the statements:

**High inflation often means that...**

1. ...people do not want to save their money.
2. ...foreign companies can sell goods/services more easily.
3. ...people don’t buy so many things.
4. ...companies find it difficult to sell goods/services locally.
5. ...more people lose their jobs.
6. ...companies find it difficult to sell goods/services internationally.
7. ...people do not have so much money to invest in business.
8. ...people can’t buy so much with their income (wages/pension, etc).
9. ...people borrow more money than usual.
10. ...everybody gets richer.
11. ...people store value in commodities (e.g. gold), not in money.
Hyperinflation

Hyperinflation is inflation at a very high rate. Price rises are out of control and unpredictable. Some economists say hyperinflation exists when prices increase more than 50% each month.

Hyperinflation in Yugoslavia, 1993-1995

In 1993 Yugoslavia, in Central Europe, was a Communist state. The government controlled the economy. In the 1980’s, because of bad economic management, the government had to print lots of money to repay debts. This created inflation of about 15-25% per year. It also used savings that citizens had put in government banks.

In 1993, most shops in the country were operated by the government. Because of its financial problems there were very few goods in these shops. A huge black market developed, with high prices because goods were so scarce. Petrol became so expensive that most people stopped driving, only 40% of public buses operated, and the government refused to give any fuel to the farmers at harvest time. The government didn’t have enough money to maintain public services (schools, hospitals, roads, etc.).

To try and control inflation, the government controlled the prices of goods produced in the country. Soon, producers stopped producing anything because they couldn’t make any money. In October 1993, bakers in the capital city, Belgrade, stopped making bread. Average daily inflation reached 100%.

The situation became worse and worse. The country began to collapse. Many workers went on strike because they could no longer survive on their wages. Pension payments stopped. Many businesses refused to accept the Yugoslavian currency (the Dinar) because it was losing its value so quickly. Between October 1993 and January 1995, prices increased by 5,000,000,000,000,000% (5 quadrillion percent).

1. Answer the questions below about hyperinflation in Yugoslavia.

1. Why was there such a big black market in Yugoslavia in 1993?
2. What problems did the high price of petrol create?
3. How did the government try to control inflation? What happened?
4. Why did many businesses refuse to accept the Yugoslavian Dinar at this time?
Inflation in Burma

1. What do you know about prices / inflation in Burma today? Do you see any similarities with the situation in Yugoslavia in 1993? What about state control, the black market, and people’s ability to buy basic goods and services? In groups, write down some ideas to share with the class.

2. Have a look at the graph. What does it tell you about the rate of inflation in Burma? Is it high or low? Do you think the information is correct?

Inflation Indicators
It is difficult to get accurate figures about the Burma’s economy. This is because the regime is often secretive, and economic activity in the black market is not officially reported.

However, there are certain indications that inflation in Burma is very high, perhaps approaching hyperinflation. For instance, according to the official exchange rate in 2006, US1$ is worth 5.84 kyats. On the black market, US1$ will buy you up to 1350 kyats, and the exchange rate continues to rise.

The official supply of petrol in Burma is through a state monopoly. Car owners are only allowed two gallons of petrol per day from government petrol stations. A lot of petrol is available on the black market. On 20th October 2005, the SPDC increased the price of government petrol (gasoline) nine-fold, from 160 to 1500 kyats per gallon.

On March 27th 2006, the SPDC announced huge pay rises for senior regime personnel and civil servants. The salaries of top officials increased by about 1000% to up to 200,000 kyats per month. The lowest paid officials received a 500% increase to 15,000 kyats per month.

3. Think of three questions about the text above. Write the questions and answers on separate pieces of paper. Swap questions with another pair, and answer their questions.

4. If possible, find people in your community who recently came from Burma. Ask them about inflation. Are prices rising fast? Can they give any examples? What problems is this creating? Prepare a short presentation for the class.
9. Tax

**Groupwork**

1. What do you know about tax? Create a mind-map.

Tax is the money paid to the local or central government by individuals and businesses. It usually means legal, official, and controlled payments, rather than forced taxation (extortion) by non-legitimate groups.

This money is usually spent on essential services such as **health**, **education** and **transport**.

**Discussion**

2. How about tax and extortion in Burma? Do you think a military regime has the right to ask for tax if the people cannot control how they spend it?

There are **two** main types of taxes:

1. **DIRECT TAX**
   A tax on individuals or businesses.
   
   **Examples include:**
   Income Tax: *tax taken out of an individuals income (wages)*.
   Business Tax: *tax paid by businesses on their profits*.

2. **INDIRECT TAX**
   A tax on a good or a service.
   
   **Examples include:**
   Value Added Tax (VAT): *this is put on to the price of most goods and services. VAT in Thailand is 7% of the value of the good or service.*
   Property Tax: *tax paid on the value of an individual’s house.*
   Excise Tax: *tax paid on specific goods, such as petrol, alcohol or cigarettes.*
   Import Tax: *tax paid on goods imported into a country.*

**Discussion**

3. Do you, or your family, pay any tax? What kinds of taxes do you pay? Which taxes are direct and indirect? What about extortion? Does it exist in your community? If so, in what ways?

**Fairness of Income Tax**

There are different ways of taxing people’s incomes.

1. **Progressive Taxation**
   The more money you earn, the higher the percentage of your income you pay in tax.

2. **Proportional Taxation**
   Everybody pays the same percentage of the money they earn.

3. **Regressive Taxation**
   The more money you earn, the lower percentage of your income you pay in tax.

People often disagree about which system of income tax is fairer.
Look at each graph. Decide whether it is showing progressive, proportional or regressive taxation. Write your answer in the box to the right of each graph.

1. **MONTHLY INCOME**  
   (Thai Baht)

   ![Graph 1]

   

2. **MONTHLY INCOME**  
   (Thai Baht)

   ![Graph 2]

   

3. **MONTHLY INCOME**  
   (Thai Baht)

   ![Graph 3]

   

---

The Curriculum Project  
ECONOMICS: an introduction - Student's Book  
27
1. Read what the people below are saying. Which kinds of income tax is each pair talking about? Which one do you agree with, and why?

1. It’s not fair! Just because I earn a lot of money I pay 30% tax on my income, but you only pay 10%. And I don’t use public services any more than you do!

   Yes, but if I paid 30% on my income, I would have very little money left, but you can easily afford it! Also, as you are successful, you should give more back to society.

2. We both pay the same percentage of our income. I think that’s fair. I pay less tax because I earn less.

   That’s not fair at all! I employ lots of people in my factory so I contribute much to society. I should pay less tax than you!

3. My children go to private schools, not government ones. I go to a private hospital if I’m ill, and I never use public transport because I have a car. I should pay a smaller percentage of my income in tax than you!

   Rubbish! I work much harder than you, but I earn much less money. The rich should help the poor by paying more tax than them.

2. You are the leaders of a political party in democratic Burma. An election is taking place in a few months. You are deciding the party’s tax policy. Agree among yourselves which is the fairest income tax system for Burma and why. Present your party tax policy to the class, explain why you have made that choice. Why do you think your policy is fair for Burma?
Black Markets
All goods and services that are illegal (including stolen goods), or which are produced and sold secretly to avoid taxes or licenses, are described as being in the ‘black market’.

Black markets develop when the state places restrictions on the production or supply of goods and services which conflict with market demands, or when weak laws make it easy to produce fake goods. Black markets exist in all economies, but tend to be larger in economies with many restrictions or particularly weak laws.

Sometimes black market goods are cheaper than legal market goods because they have been produced without paying the usual taxes. In other cases, black market goods can be more expensive than normal prices because they are difficult to get, and may not be legal.

The laws of supply and demand dominate black markets just like normal markets. If a good or service that people want is scarce and/or illegal, the price will rise, and there will be more incentive for the black market to sell it. Furthermore, if legal goods are particularly expensive and in demand, then there is an incentive for the black market to produce and sell them more cheaply.

The Burma-Thailand Black Market
The centres of black market trade between Burma and Thailand are the three most important land border crossings: Tachilek-Mae Sai, Myawaddy-Mae Sot and Kaw Thaung-Ranong. Some economists believe that the black market in Burma is twice as big as the official economy (i.e. as much as US$150 billion per year). Every day huge amounts of black market goods cross the borders.

Discussion 1. Do you know what a ‘black market’ is? Can you guess?

Black Markets
All goods and services that are illegal (including stolen goods), or which are produced and sold secretly to avoid taxes or licenses, are described as being in the ‘black market’.

Groupwork 2. Is there a black market in your community? If so, what kinds of goods and services are sold in it? Why are they sold on the ‘black market’?

Black markets develop when the state places restrictions on the production or supply of goods and services which conflict with market demands, or when weak laws make it easy to produce fake goods. Black markets exist in all economies, but tend to be larger in economies with many restrictions or particularly weak laws.

Sometimes black market goods are cheaper than legal market goods because they have been produced without paying the usual taxes. In other cases, black market goods can be more expensive than normal prices because they are difficult to get, and may not be legal.

Pairwork 3. Which goods do you think are sold most widely in the black markets throughout the world? Make a list in pairs. Why do you think there are so many of these particular goods on the black market?

The laws of supply and demand dominate black markets just like normal markets. If a good or service that people want is scarce and/or illegal, the price will rise, and there will be more incentive for the black market to sell it. Furthermore, if legal goods are particularly expensive and in demand, then there is an incentive for the black market to produce and sell them more cheaply.

Discussion 4. Why do you think the black market is so big in Burma? What kind of black market goods do you think are traded at the three border crossings? What are the advantages and disadvantages of the black market for Burma?
10. Production

Brainstorm

1. Think about a cotton shirt. What do you need to produce (make) it?

How are things produced (made) in an economy? People often think about factories, but in fact there are four important parts of production:

1. LAND - This includes all natural resources in the land (forests, rivers, oil, etc.).
2. LABOUR - This is the work done by people to make goods and services.
3. CAPITAL - This is the money and tools used to produce goods and services.
4. ENTERPRISE - This is the organisation of the parts of production.

1. LAND

Everything that is produced in the economy uses natural resources (land).

Crops are grown in the soil and fed with water from rivers, streams or underground. Houses and shops are built with wood and bamboo from the jungle or stones and metals from the ground. Mineral resources like gold and coal are dug from underground. Every factory, market and shop needs land for a building.

Land is therefore a central part of production in every part of the economy.

Pairwork

2. What land (natural resources) is there in your community? Make a list.

Ownership of Land (Natural Resources)

Much of the land (natural resources) in the world is owned and controlled. It can be owned by people, communities, businesses, governments, kings, queens, etc..

In economics, if you ‘own’ something you have the right to decide how it is used (within the law). If you do not own something, you do not have the right to decide how it is used.

If the government (state) owns the land, it is called public ownership.
When land is owned by a community, it is called collective ownership.
When land is owned by individual people or businesses, it is called private ownership.

Groupwork

3. Can you think of examples of each kind of land ownership in your own community?
Problems of land ownership
In Blue Village in Mazalia, 99% of the nearby forest is privately owned by one rich man. He is very selfish and refuses to allow other villagers to cut down any trees to build houses.

The land around Green Village in Mazalia is publicly owned by the government. One day a government official arrives in the village and says that the government wants to look for oil in the ground under the village. Therefore, unfortunately the village will have to be destroyed.

In Red Village in Mazalia, the farm land around the village is collectively owned by all the villagers. Today, though, no crops are growing because the villagers cannot agree on what to grow. Half the village want to grow rice, but the other half want to grow yellow beans.

Groupwork 1. Can you see any problems with the three different kinds of land ownership?

Fighting for agricultural land rights in Brazil

Brazil is the largest country in South America. It was colonised by Portugal in 1500. The Portuguese took control of the land and gave it away to rich Portuguese families. This meant many local people became landless.

Brazil became independent in 1822 but inequality continued. Now less than 3% of the population owns 65% of farmland. 60% of this land is currently unused while 25 million peasants are landless and struggle to survive.

To fight for land rights, peasants organised themselves to occupy unused private land. In 1985, hundreds of peasants occupied a large unused farm in the south of Brazil. They started a community where everyone shares the land, work, food, healthcare and education. Two years later, the government gave the peasants the right to stay on the land they were occupying. This was the start of the Landless Workers’ Movement (MST).

In 1988, Brazil got a new constitution. Part of the constitution was about land. It said that land not being used well should be taken by the government and given to poor people. This gave very important legal rights to all landless people. After occupying land, they could go to court and try to win the right to stay on it and cultivate it.

In many areas, poor farmers grow coffee on the land of rich landowners, and give them a share of the crop in return. This is called ‘sharecropping’. Often, however, the farmers have to give so much to the landowner that they can never make enough money to become independent. MST say that this system only helps the rich people, and that sharecroppers are almost like slaves. They have now started to occupy sharecropping land in areas where many are hungry.
1. Write answers to the questions that your teacher gives you.

2. Who owns the land in your community? Is there private, public and collective ownership? Are there problems with land ownership? Why?

3. You are working for land reform your community. Which kinds of land ownership would be best, and why? How can you help the poorest people?

4. True or false. Complete the exercise that your teacher gives you.
2. LABOUR

Labour is the **work** people do to produce goods and services. Labour can be **paid** or **unpaid**.

**Brainstorm**

1. What work is done in your school? List all the jobs you can think of. Include jobs that people get paid for, and jobs that people don’t get paid for.

**On Your Own**

2. Have a look at the pictures below. What kinds of labour do you see?

![Labour Pictures]

- a.
- b.
- c.
- d.

**Ko Shwe and Naw Berry**

Ko Shwe’s job is repairing the railways. He usually works 8-10 hours a day, 6 days a week.

Naw Berry is married to Ko Shwe. She works at home. She looks after their children, washes clothes, cooks and cleans. She usually works 10 - 12 hours a day, 7 days a week.

**Discussion**

3. Which worker is do you think is paid? Which do you think is unpaid? Why do you think one of them is paid, but the other unpaid?

**Labour segregation**

How do we decide who does the different jobs in society? This question is about **segregation of labour**. In many societies, labour is often divided by **gender**. Men and women do different kinds of jobs. Often men and women’s labour is not considered equal, or rewarded equally.

**Groupwork**

4. What kind of **segregation of labour** is there in your community? What kind of work do men do? What kind of work do women do? Is labour divided in other ways, like ethnicity, wealth, age, social status?

5. Are men and women’s work rewarded equally in your community? Why/Why not? Do you think it is fair?
Labour specialisation
In many societies, education and experience affect the kinds of jobs that people can do. Someone with no medical experience can’t get a job as a doctor. To get a job as a doctor in a hospital, people need to study for many years and get work experience.

Modern societies can produce a lot of food through intensive agriculture, so people can specialise in a job. While some people grow food, other people can be teachers, medics, managers, or shopkeepers. They rely on other people to produce their food.

In many societies, specialisation can mean people have to do the same job all their life. If labour is very specialised, jobs can be very boring. This often happens in factories. People specialise in a particular task, or a single part of a machine, such as putting labels on bottles, or glueing two parts of a shoe together. They often repeat this action hundreds or thousands of times every day.

3. CAPITAL

Capital is the money and tools (capital goods) needed for production.

a. Money capital
Money capital is the money you need to start, continue and increase production.

Nang Htay has a small shop in Mae Sot. She worked in a factory for two years to save 25,000 baht to open the shop. She recently invested an extra 3,000 baht for a license to sell cigarettes. Every month she spends 4,000 baht on buying new stock. By selling the goods in her shop, she gets 12,000 baht per month. She pays herself a monthly salary of 5,000 baht and spends 2,000 baht every month on transport, shop maintenance, and taxes.

b. Capital goods
Capital goods are the tools needed for production. These tools can be simple or complicated. To harvest crops, a farmer can use a buffalo or a tractor. To produce shoes in a factory, the owners need the factory, a generator, lights, glue, paint and many other capital goods.

3. What money capital and capital goods are used in your school? Where do they come from? Write a list.
4. ENTERPRISE

Enterprise is the organisation of the other factors of production: land, labour and capital.

Different kinds of enterprise

Production can be organised in a number of different ways:

1. Small businesses: Small businesses are usually owned by one person, or a small group of people. They usually work very locally. Examples of small businesses are a food stall on the side of the road, a small sewing shop repairing and making clothes, or a motorcycle taxi driver.

2. Local companies: When a group of people invest in starting and continuing production, they are usually starting a company. Companies are often run by a small group of people chosen from all the people who invested money. The small group then chooses a manager to run the company. Examples of local companies are some newspaper or beer companies.

3. State companies: State companies are controlled by governments. The expenses come from governments and profits go back to governments. They are run like companies. Many services like energy, transport and water are run by state companies.

4. Corporations: These are large companies, or groups of companies. They often produce many different kinds of goods, and do business all over the world. Examples include Toyota, Colgate-Palmolive, Coca-Cola, and Unilever.

5. Cooperatives: This is a business owned and managed equally by its members. In companies, a manager (or a group of managers) makes decisions. In cooperatives, members have meetings so everybody is involved in making decisions.

Pairwork
1. The teacher will give you some information about different enterprises. Decide which kind of enterprise they are.

Discussion
2. Which kinds of enterprise exist in your community?
Below is an example of the land, labour, capital and enterprise used in the production of paper.

**THE PRODUCTION OF PAPER**

**LAND:**

Trees
Water
Land for cutting down and growing trees
Land for the factory

**LABOUR:**

Cutting down trees
Transporting trees to the factory
Working in the factory to turn the trees into paper

**CAPITAL:**

Money to invest
Saws
Trucks
Factory building
Factory machines
Chemicals

**ENTERPRISE:**

Entrepreneur
Management team

---

**Pairwork**

1. Working in pairs, design a poster showing the production of another good or service. You should include words and pictures. Using your poster, explain to the class the different things needed to produce that particular good or service.

**Groupwork**

2. What is produced in your community? In groups think of two things and identify the land, labour, capital and enterprise used to produce them.

Employment means having a job (usually a paid job) - the exchange of labour for money.

**Brainstorm**

1. Most people spend more than half their lifetime at work. Why do we work? How many reasons can you think of?

**Discussion**

2. Does everybody want to work? As a group, discuss why some people might not want to work. Do you want to work, now or in the future? What kind of work do you want to do?

**Labour & Unemployment**

The work that people do is called labour. The labour market is where buyers of labour (i.e. businesses) and sellers of labour (workers) negotiate wages (how much they are paid for the labour they give) and working conditions. The labour force is the total number of people who are able to work.

People who can’t find jobs are unemployed. Unemployment exists when the number of workers (and their skills) needed in the labour market is less than the number of workers looking for work.

Thet Aung is a carpenter. He lives in Demawso in Karenni State. Two months ago he was very busy. Three people employed him to help build their houses.

At the moment, no one in the town is building a house. They do not need a carpenter. Therefore, Thet Aung cannot find work. He is unemployed.

An employer is the person who employs other people.

An employee is the person who is employed by the employer.

If a person works for themself, they are called self-employed.

Sai Serdai works in a restaurant called the Salawin River in Mae Hong Son. The restaurant owned by Nang Far. Who is the employer and who is the employee?

**Brainstorm**

3. What kind of employment do people have in your community?

**Discussion**

4. Is there a lot of unemployment in your community? Why? Why not?
Labour Law

All countries have laws about work, some more than others. These laws say who is allowed to work, how long they should work for each day, at what age they should start and stop working, the minimum amount of money that they should be paid (the ‘minimum wage’), and the conditions that employers must provide. These laws are designed to protect workers from discrimination and exploitation.

In some countries, labour laws are very weak. Employees have very little protection from exploitation. Employers don’t have to care about the law.

Discussion

3. Have a look at the picture on the right. What do you think it is trying to say about exploitation and labour law?

Labour Supply & Demand

The amount of labour needed in an economy, and the amount of labour available, changes all the time. In a growing economy, businesses need more workers. This usually means that wages increase, as businesses are competing for a scarce resource (workers). The higher wages become, the more people want to work.

If an economy is slowing down or shrinking, the demand for labour decreases. Businesses start to lay off their workers, and do not look to employ other people. This usually means that wages stop increasing, or even decrease, because there are many workers available, but not many jobs.

In a healthy economy, there should be a reasonable balance between labour supply and demand, with low unemployment and steady wage increases.

Discussion

2. What kinds of laws do you think countries have about work/labour?

4. You work for the Labour Ministry of the Government of a democratic Burma. The Prime Minister has asked you to write five statements about who should be allowed to work, and who should not, and what kind of work people should do. Some of the things that you could consider are:

- Age
- Gender
- Ethnicity
- Religion
- Disability
- Nationality
Burmese migrant workers in Mae Sot

In August 2004 a court in Mae Sot ordered the Thai owner of a clothing factory to pay 1.17 million baht (US$29,250) to 18 Burmese migrant workers.

They were among 60 Burmese employees who were fired from the Nut Knitting factory in October 2002 because they demanded better working conditions. The workers were also severely beaten by gangs linked to the company for protesting against their unfair treatment.

“Thursday’s decision is unprecedented,” Pranom Somwong of the Migrant Action Programme (MAP), a labour rights group based in Chiang Mai, said in an interview.

Many migrant workers didn’t believe they could beat the Thai legal system. This was the first-ever legal process brought by Burmese workers in Thai courts.

But this victory has given confidence to labour rights activists. They believe it could help to win more rights for the thousands of Burmese who work in unpleasant conditions to earn a very small wage.

“This case will encourage others whose rights have been ignored to fight for their rights in the Thai labour courts,” Moe Swe, who heads Yaung Chi Oo Workers Association, a Mae Sot-based group of Burmese migrants, said in an interview.

It was not an easy battle, Moe Swe admitted. The workers were scared of being arrested. They didn’t know much about their rights or the court system. They had to survive on the limited money they had because the other factories in Mae Sot had refused to employ them because they were ‘troublemakers’.

The troubles of Burmese labourers in Mae Sot show the difficult circumstances of migrant workers in Thailand, who have dirty, dangerous and back-breaking jobs.

1. Answer the following questions about migrant workers in Mae Sot.

2. Think about the following questions in groups.

a. Why are Burmese migrant workers usually treated worse than Thai workers in Thailand?
b. What are the economic advantages for Thai employers who treat Burmese migrant workers unfairly?
c. What do you think are the best ways to change the situation?
Working Conditions
Working conditions are the circumstances in which people work. It includes how workers are treated by the employers, the building where they work, the materials they work with, the breaks and holidays they receive, etc. Employers usually try to reduce costs as much as possible to keep prices low and maximise profit. Providing good working conditions can be expensive - high wages, expensive equipment, paid holidays, etc. - so employers may try to avoid them. Some governments decide not to make many laws about working conditions, or ignore existing laws, as they do not want to make it too expensive or difficult for employers to employ or lay off people.

1. Can you imagine what bad working conditions are? Give your ideas.

Labour Unions
A labour union is when a group of workers get together to obtain, improve and protect their labour rights and working conditions. As a group they have more power to negotiate with their employers. If a union and an employer cannot agree, the union can threaten to go on strike. A strike is when workers refuse to work to try and force their employer to improve their conditions.

The Bryant & May Matchgirls Strike, London, England
In London in June 1888, journalist Annie Besant heard about the terrible working conditions of women at the Bryant & May match factory. She interviewed workers there and found that the women worked 14 hours a day for a tiny wage. They often didn’t receive their full wage because of a system of fines for talking, dropping matches or going to the toilet without permission. Those who arrived late to work were fined half a day’s pay.

Annie Besant also found that the women’s health had been badly affected by the phosphorous (a chemical) used to make matches. It caused yellowing of the skin, hair loss, and ‘phossy jaw’, a form of bone cancer. The face turned green and leaked pus, which finally caused death.

On 23rd June 1888, Annie Besant wrote an article called ‘White Slavery in London’. She complained about the way the women were treated. Bryant & May tried to force the women to sign a statement that they were happy with their working conditions, but a group of women refused to sign, and were fired. In response, 1400 women at Bryant & May went on strike.

Annie Besant, and other journalists used their newspapers to call for a boycott of Bryant & May matches. The women at the company also decided to form a Matchgirls’ Union and Besant agreed to become its leader. After three weeks the company said that it was willing to re-employ the women, and would also stop the fines system. The women accepted the terms and returned in triumph. The Bryant & May dispute was the first strike by unorganized workers to gain national publicity. It also helped to inspire the creation of unions all over the country.
12. Oil

Discussion 1. How oil is formed? Why do you think oil is important in economics?

What is oil?

Most oil was created millions of years ago. Dead plants and water animals fell to the bottom of oceans, streams, rivers, and lakes. These plants and animals were slowly covered with layers of sediment (rock dust in the water). The weight of the sediment created heat and pressure which changed these plants and animals into oil. Oil is a finite resource, i.e., there is a limited supply of it.

Pairwork 2. What things do you think are made using oil? How about the things around you? Make a list.

Brainstorm 3. One of the most important uses of oil is as a fuel (a source of energy). What things is oil used as a fuel for?

On Your Own 4. The three largest fuel sources used in the world are Coal, Oil, and Natural Gas. On the chart, A, B, and C each represent one of these sources. Can you guess which is which?

What oil is used for?

Oil-based fuels, including petroleum (gasoline) and diesel fuel, are used to power many of the world’s engines in motorbikes, cars, trucks, buses, trains, ships, aeroplanes, generators, factories, power stations, etc. Oil is also used to produce thousands of other products including road surfaces (bitumen), chemicals, plastics, cosmetics, clothes (polyester), shoes, compact discs, ink, cleaning fluids, candles, fertilizers, camera film, etc. Today we consume 160 times more oil than in 1900.

Discussion 5. Do you know which countries consume the most oil? Can you guess?

Oil Consumption

By far the largest consumer of oil is the US. With only 5% of the world’s population, the country consumes 26% of the oil produced each day. Other big oil consumers include Japan, China, and Germany. Developed (rich) countries tend to use a lot more oil per person than developing (poor) countries.

Pairwork 6. Which sector in the US do you think consumes the most oil? Decide on the correct order from highest to lowest. What percentage of oil do you think each sector uses?

<table>
<thead>
<tr>
<th>Residential</th>
<th>Commercial</th>
<th>Electricity Generation</th>
<th>Transportation</th>
<th>Industrial</th>
</tr>

</tbody>
</table>
1. **Access to oil.** Listen to the text. Summarise the **main points.** At the end of the exercise, compare your main points with a partner. Do you agree?

2. **What do you think is the relationship between oil, economics and power?** Have a look at the images and text below. Think about the questions in each paragraph and prepare ideas for a discussion.

1. A sign displayed during a **demonstration** in the US against the war in Iraq. Why do you think the demonstrators have written “NO BLOOD FOR OIL”?

2. Ken Saro-Wiwa, an environmental **activist** from Nigeria, was executed by the Nigerian government in 1995. His people, the Ogoni, live in the Niger Delta. Foreign oil companies have been extracting oil from this region for over 50 years, causing huge environmental damage. Saro-Wiwa wanted **compensation** for his people, and a share of the US$30 billion of oil sold from this region. Why do you think he was killed?

3. Bolivia is a poor country in South America. Its small oil and gas resources are extracted mainly by foreign companies. On May 1st 2006, Bolivian President Evo Morales decided to **nationalise** the country’s oil. Foreign companies would receive 18% of the oil they extract, with 82% going to the government. In September, this policy was suspended due to international pressure. Why does Morales want to nationalise Bolivian oil?

4. This is an advertisement produced by the Burma Campaign UK about the French oil company, Total. What message is it trying to convey and why? Do you know the meaning of “**totalitarian**”? What do you know about Total’s activities in Burma?

The Organisation of Petroleum Exporting Countries (OPEC) is an international organization of 12 countries in Asia, the Middle East, Africa and South America. They control 65% of the world’s oil reserves. OPEC’s goals are to protect the interests of its members and influence oil prices. In 1973, when Israel was at war with Syria and Egypt, the Arab members of OPEC refused to supply oil to the US. They accused the US of helping Israel. What do you think happened to oil prices and supplies during this period?
The future of oil

1. How soon do you think oil will run out? Guess a date, and draw a circle around it.

2. Listen to the paragraph that your teacher will read to you. Fill in the gaps in the text below. When you have finished, compare with your partner.

Oil consumption depends on two things: ___________________. It is impossible to know exactly how much oil remains in the Earth. New sources are still being found, though much less often than before. The world’s proved oil reserves are currently ________ billion barrels. It is also difficult to predict how much we will consume in the future, although consumption rates are still rising rapidly. World demand for oil has risen from _______________ barrels in 1986 to ____________ barrels in 2006. Some scientists think that there will be serious oil shortages by about ___________, and the price of oil will be so high that many countries will not be able to afford it. The price of a barrel of crude oil rose from _______________ in January 2004 to _______________ in October 2006.

3. How will rises in the cost of oil affect your community? What will happen to the cost of other things if oil prices increase? What about transport, food, construction materials, etc?

Oil and gas in Burma

Burma has oil, but in small amounts. The country produces about 8000 barrels of oil per day, mainly from the Yetagun oilfields in central Burma (Saudi Arabia produces nearly 9 million barrels per day.). The government intends to try to extract more from the Irrawaddy Delta, and from under the sea.

However, Burma does have a lot of gas. In the 1990’s the regime, working with various foreign companies such as Total and Unocal, built the Yadana-Yetagun gas pipeline. The SPDC receives at least $350 million in annual income from the Yadana and Yetagun gas and oil projects. It is now developing another project, the Shwe Gas Pipeline in the Bay of Bengal, with South Korean and Indian companies. It is estimated that the Shwe Gas Pipeline will earn the regime as much as $800 million per year, should it be completed, and possibly much more.

Total and Unocal received a lot of criticism from international organisation who condemned their participation in the Yadana gas pipeline project. The construction of the pipeline included forced labour and the confiscation of land from villages on the pipeline route. Critics say that Total and Unocal knew about these human rights abuses but did nothing to stop them.

4. True or false. Complete the exercise that your teacher gives you.

5. Should democratic governments and oil companies extract / buy oil from corrupt non-democratic governments with bad human and environmental rights records? How else can they obtain the energy they need?
11. Economic Indicators

Economic indicators are different ways to measure the economic health of an economy, and a country. They give information about how rich or poor the country is, and how quickly the economy is growing or shrinking. Economic indicators are also used to find out the standard of living in a country.

**Groupwork** 1. What kind of things do you think you could use to measure the standard of living in a country? In your groups, make a list of indicators.

1. Gross Domestic Product (GDP)

GDP is the total value of all goods and services produced within a country in one year. The table below shows the GDP of selected countries in 2005.

<table>
<thead>
<tr>
<th>Country</th>
<th>GDP (millions of US dollars)</th>
</tr>
</thead>
<tbody>
<tr>
<td>USA</td>
<td>11,605,185</td>
</tr>
<tr>
<td>China</td>
<td>7,334,254</td>
</tr>
<tr>
<td>Japan</td>
<td>3,817,221</td>
</tr>
<tr>
<td>India</td>
<td>3,290,800</td>
</tr>
<tr>
<td>Germany</td>
<td>2,391,569</td>
</tr>
<tr>
<td>Thailand</td>
<td>174,545</td>
</tr>
<tr>
<td>Burma</td>
<td>76,200</td>
</tr>
</tbody>
</table>

2. What do you think of these figures? Do you think they give an accurate picture of the economic situation of each country?

2. Gross Domestic Product per person (GDP per person)

GDP per person (also called GDP per capita) divides the GDP by the number of people in the country. Have a look at the GDP per capita for the same countries in 2005. What do you notice?

<table>
<thead>
<tr>
<th>Country</th>
<th>GDP per person (US dollars)</th>

<td>2,521</td>
</tr>
<tr>
<td>Burma</td>
<td>1,800</td>
</tr>
</tbody>
</table>

**Discussion** 2. What about GDP per person? Do you think it is a more accurate economic indicator than GDP? Why / Why not? Do you see any potential problems with GDP per person?
1. In pairs, answer the questions below about Equatorial Guinea.

1. Why is Equatorial Guinea’s GDP per person so high?
2. If the GDP per person is so high, why are so many people poor?
3. How does the country keep control over the people?
4. Why does this example demonstrate the limits of using GDP per person as an economic indicator?

**Economic Indicators (cont’d)**

**GDP per person in Equatorial Guinea**

Equatorial Guinea had the second highest GDP per person in the world in 2005, at US$50,205. The country has become rich since large amounts of oil and gas were discovered under the sea near the country’s coast in 1995. Equatorial Guinea makes about US$2 billion per year from oil sales, which has created rapid growth in GDP.

This might make you think that most people in Equatorial Guinea are rich. However, the reality is very different. Most of the money made from oil has been taken by the President, Teodoro Obiang Nguema, and the people close to him.

Despite the government’s claims that $400 million has been spent on health, housing and education, most people are uneducated and live in slums. The government and the military keep tight control over the country, elections have been condemned as unfair, and government violence and corruption are common.

Therefore, despite being a ‘rich’ country on paper, with a high GDP per person, most of the population of 500,000 are very poor. This shows the limits of using GDP per person as an economic indicator.
The UN Human Development Index (HDI) is a measure of poverty, literacy, education, life expectancy, childbirth, and other factors for countries worldwide. The HDI measures the average achievements in a country using **three** criteria:

- A long and healthy life, as measured by **life expectancy** at birth.
- Knowledge, measured by the number of **literate** students attending school.
- A decent **standard of living**, as measured by GDP per person and the **relative** ability of people in the country to buy goods and services.

Each year, UN member states are listed and ranked according to these indicators. Countries are ranked on a scale of 0 to 1. Countries at 0.8 and above are considered to have high development. Countries with 0.5 and below are considered to have low development. The highest ranked country in 2005 was Norway with an HDI of 0.963. The lowest ranked was Niger with an HDI of 0.281. Look at HDI figures in 2005 for the countries below.

<table>
<thead>
<tr>
<th>Country</th>
<th>HDI</th>
</tr>
</thead>
<tbody>
<tr>
<td>USA</td>
<td>0.944</td>

<tr>
<td>China</td>
<td>0.755</td>
</tr>
<tr>
<td>India</td>
<td>0.602</td>
</tr>
<tr>
<td>Burma</td>
<td>0.578</td>
</tr>
</tbody>
</table>

**Pairwork**
1. Identify and write down three key points from the information above.

**Discussion**
2. What do Burma’s economic indicators tell you about the country? Do you think these figures are correct?

**Discussion**
3. Look at the map below showing the world HDI in 2004. What do you notice?

**Groupwork**
4. What kind of HDI score do you think your community would receive? Why?
14. Economic Systems

1. What do you think are the most important decisions that countries/governments have to make about their economies?

Around the world, different countries manage their economies in different ways. Different governments have different amounts of control over their economies. In some countries, such as the USA and Great Britain, most economic activity is private. The government establishes basic laws but does not interfere much in people’s business activities. In other countries, such as North Korea, there is very little private business.

However, all countries have to make the same basic economic decisions:

1. What (and how many) goods and services to produce.
   E.g. oranges or mangoes, pigs or cows, education and healthcare?
2. How to produce the goods and services.
   E.g. what tools to produce them with, and where to produce them.
3. Who should receive the goods and services, and how many/much.
   E.g. men, women, adults, children, people in cities, people in villages?
4. How much goods, services and labour should cost.

Three main economic systems have developed to make these decisions:

1. **FREE MARKET ECONOMY**
   Economic decisions usually made by individuals and businesses (private sector). They decide what to produce, how to produce, and for whom to produce. Resources are distributed using the forces of supply and demand.

2. **PLANNED ECONOMY**
   Economic decisions usually made by the government (public sector). The government makes plans about what to produce, how to produce and for whom to produce. Therefore, resources are distributed by the government through a system of planning.

3. **MIXED ECONOMY**
   Some economic decisions are made by individuals and business, and some by the government. Some resources are distributed through supply and demand, and some resources are distributed through government planning.

Economies are rarely completely ‘free’ or ‘planned’. Most economies in the world fall into the ‘mixed economy’ category - decisions about the allocation of resources are shared between private individuals and businesses, and the government. Each economy has a unique combination of ‘private’ and ‘public’ ownership, and different levels of control by governments.

**Groupwork**

2. Have a look at the information above for a few minutes. Try to remember the ideas, not the words. Your teacher will then give you a quiz.
A. I think my country has the best economic system. The government provides free healthcare, lots of public transport, and cheap electricity and water. They don’t interfere much in my business, though. I decide what I want to do, and how much I charge.

B. My country definitely has the best economic system. Almost all of our goods and services are produced by private businesses. Competition keeps prices low and levels of service high. The market makes almost all the economic decisions.

C. You’re both wrong! We have the best system. Our government provides everything for us: goods, services, jobs, healthcare, transport, infrastructure, housing, etc., and decides the prices. We don’t have to worry about anything.

On Your Own
1. Which kind of economic systems are the three people above talking about? Read what they say, and decide below:

A: 
B: 
C: 

Economic Freedom
Some economists and politicians talk about ‘economic freedom’. They consider a free market economy to have more freedom than a planned economy, because the market, not the government, makes most of the economic decisions. They believe this will lead to a richer, better, freer society. However, many people do not agree totally with this point of view.

Discussion
2. What do you think about these questions on ‘economic freedom’?

Should people have the economic freedom to do anything in order to make money? Who should have more economic control, the government or the people? Should rights be more or less important than economic freedom? When and why should economic freedom be restricted?

Groupwork
3. What do you think might be the dangers of a completely free market, or completely planned economy? Discuss this in your group, and make two lists with ideas about possible dangers for each kind of system.
Wealth distribution and economic freedom

While some people strongly support the ‘free market’, it is a controversial issue. Those who support the idea of the free market believe that it is the fairest way to manage an economy. They argue that, in a free market, competition encourages new ideas, keeps prices low, offers more choice to buyers, and gives opportunities to everyone to obtain wealth. They argue that government interference should be minimised - the free market can control itself.

However, other people disagree with them. They argue that the free market encourages huge inequalities in the distribution of wealth. They argue that, while some people are able to obtain great wealth, many other people have to live in extreme poverty. This happens both within countries, and between countries. They believe that the lack of government control helps the rich get richer, while the poor become poorer. Education, healthcare, transport become increasingly difficult for the poor to access because it is ‘private’, i.e. you have to pay for it.

1. What about Burma? How would you define the Burmese economy? How much control do the private and public sector have? How much economic freedom do people have? What about the relationship between economic freedom and rights. Think about:

<table>
<thead>
<tr>
<th>Economic Policy</th>
<th>Education</th>
<th>Transport</th>
</tr>
</thead>
<tbody>
<tr>
<td>Production</td>
<td>Healthcare</td>
<td>Agriculture</td>
</tr>
<tr>
<td>Energy</td>
<td>Communications</td>
<td>Natural Resources</td>
</tr>
</tbody>
</table>

2. You are the Economic Strategy Committee of the government of a newly democratic Burma. You have been asked by the prime minister to develop the economic strategy for the next 50 years. Next week you will present your strategy to the parliament and they will vote on whether to accept your ideas. You need to decide:

a) What kind of economic system should Burma use, and why?

b) How should the following resources and services be managed. Should they be managed by the public sector, the private sector, or both? Why?

Natural Resources, Education, Transport, Production, Healthcare, Agriculture, Energy, Communications

To help you to do this, fill in the table below as a group, and decide why you have made these choices.

<table>
<thead>
<tr>
<th>Natural Resources</th>
<th>Public</th>
<th>Private</th>
<th>Mixed</th>
</tr>
</thead>
<tbody>
<tr>
<td>Production</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Energy, etc.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Present and explain your strategy and the reasons for your decisions.
15. Global Economic Institutions

Brainstorm

1. Do you know what the World Bank, the International Monetary Fund, and the World Trade Organisation do? If not, can you guess?

Pairwork

2. Quick Quiz. Your teacher will give you instructions on how to do this quiz.

The World Bank

The World Bank was created in 1944 to help rebuild economies after World War II. Today, the bank’s stated purpose is to “fight poverty and improve peoples’ lives” by providing grants and loans to developing countries to pay for development activities. Currently the bank provides US$20 billion per year for development projects. There are 185 member countries in the Bank. Each member has 250 votes, and then ‘shares’ depending on on the size of its economy. They receive one extra vote for every share. This means that countries with large economies have more influence over Bank decisions. The largest shareholder is the United States, with 16.39% of votes. Burma is a member of the World Bank, but the Bank suspended all lending to the country in 1987.

Criticisms of the World Bank

The World Bank is often criticised for ‘conditionality’. This is when loans are given with certain economic and social policy conditions. Before receiving money, countries must agree to these conditions. These can include privatising state assets, lowering import tariffs and liberalising their markets. The Bank has also been criticised for its shareholder policy. Poor countries, who are most in need of the Bank’s assistance, have the least influence over its decisions.

The Nam Theun 2 Dam Project, Laos

In April 2005, the World Bank approved US$270 million in loans for the construction of a dam on the Nam Theun River in Laos, despite much criticism from local people and environmental NGOs. The dam will provide hydroelectric power, 95% of which will be sold to Thailand. The World Bank claims that the project will deliver many benefits to Laos, including $US1.1 billion of electricity sales.

However, environmental NGOs, including the International Rivers Network (IRN), have strongly criticised the dam, and challenged the figures provided by the Bank. They say that the dam will cause huge environmental damage, and destroy the livelihoods of over 100,000 Laotian people living near the river. 6,000 people will be moved from their land, and fields belonging to 40,000 villagers will be flooded. Fish stocks may also be affected. The IRN claims that the dam will only deliver about US$30 million per year in electricity sales, with no guarantee that any of the money will be used to help local people. Despite such criticism, construction on the dam has begun.

Discussion

4. Discussion. Follow the instructions given to you by your teacher.
The International Monetary Fund (IMF)

The IMF was created in 1945 to support an international system of fixed exchange rates to help rebuild economies after World War II. Now the Fund acts more as a money-lender for countries in desperate need. It also monitors the economies of its member states, and the global economy in general. The Fund has 184 members. The size of a country’s economy determines the amount of money that they are allowed to request from the Fund (known as Special Drawing Rights). It has a similar shareholding system to the World Bank, meaning that larger economies can buy more shares, and so have greater decision-making power.

The IMF has not lent any money to Myanmar since 1988. The Fund still attends meetings (called ‘consultations’) each year with Myanmar’s government and central bank to discuss economic issues.

Criticisms of the IMF

The IMF is criticised for giving rich countries too much control over its decisions. Critics argue that rich countries use the IMF to put pressure on poor countries to reform their economies for the rich countries’ benefit (usually trade liberalisation). They argue that the IMF’s policies have worsened the financial crises in many poor countries, and created greater poverty.

On Your Own

2. Multiple choice. The teacher will give you a multiple choice exercise about the East Asia Financial Crisis. Write your answers in your notebook.

The IMF and the East Asia Financial Crisis

In 1997, many of the economies in East Asia suffered financial crises. Thailand, South Korea and Indonesia suffered the most. The graph on the right shows the ‘crash’ of the value of the Thai baht against the US dollar in 1997.

Many people blamed the IMF for the crisis. They said that it had strongly encouraged these countries to liberalise their economies quickly, without enough consideration of the possible consequences. The IMF had also encouraged governments and businesses to take out loans in US dollars. When the value of the local currencies began to fall against the US dollar, these debts became more and more expensive. The solutions offered by the IMF were also heavily criticised. They demanded drastic economic reforms, including a huge cut in government spending, and no help for failing businesses. People argue that these policies have caused much economic pain. However, other people say that there were many causes of the crisis, and that the IMF was only partly responsible.
The World Trade Organisation (WTO)

The WTO was created in 1995. Its stated aim is to ‘ensure that trade flows as smoothly, predictably and freely as possible’. The WTO has 150 member countries. Unlike the World Bank and the IMF, each member country only receives ONE vote. The WTO makes the rules for international trade, ensures that countries comply with agreements, settles trade disputes, and monitors the national trade policies of member countries. Member countries meet every few years to negotiate gradual economic liberalisation. The last trade negotiations in July 2006 failed to produce any agreement. A new round of trade talks has not yet been organised. Myanmar has been a member of the WTO since 1995.

Criticism of the WTO

Critics argue that the WTO forces poor countries to liberalise their economies while allowing rich countries to protect their own economies. They also argue that the WTO’s decision-making processes are too complicated, undemocratic and not transparent. Although there are four times more poor countries than rich countries in the WTO, poor countries are rarely able to negotiate trade policies that benefit them. Furthermore, WTO agreements can be more powerful than the national policies and laws of member countries. This threatens member countries’ democracy, independence and decision-making power.

1. Memory game. How much of the information above can you remember?

The ‘Battle of Seattle’, 1999

One of the most infamous events in the WTO’s history is the protests that took place at the WTO Ministerial Conference in Seattle, US in 1999. On November 30th, at least 40,000 people gathered outside the buildings where the conference was taking place. They wanted to protest against WTO trade policies.

Although the protests were initially peaceful, they turned violent when a group of protestors began destroying shops, cars and other property. Police responded by firing tear gas and rubber bullets into the crowd. Over 600 people were arrested over the next few days.

A fairer world?

The World Bank, the IMF and the WTO regulate international development, finance and trade. They are powerful, important and useful institutions. However, they are criticised by some people for being unfair. These critics say that these institutions fail to adequately protect the economic interests of poor countries, but unfairly protect the economic interests of rich countries.

2. Have a look at the information you have read about these institutions. What would you do to make them fairer?

Note: Global Economic Institutions are also known as International Financial Institutions (IFI’s).
16. International Trade

**Groupwork** 1. In groups, prepare a mindmap about ‘International Trade’ on a piece of paper. Present your mindmap to the class explaining your choices.

International trade involves goods and services going into and out of a country. Goods and services sold to other countries are called **exports**, and goods and services bought from other countries are called **imports**.

**Discussion** 2. Why do countries trade with each other?

1. **Supplying Needs & Wants**

Countries often don’t have enough resources and technology to meet people’s needs and wants. For instance, it is difficult for Australia to efficiently produce enough cars for the needs and wants of its people, so it buys extra cars from Japan. It is difficult for Japan to produce enough beef for people’s needs, so it buys extra beef from Australia.

**Pairwork** 3. Look at the questions below and write two lists.

a) What are Burma’s main imports? Where do they come from?

b) What are Burma’s main exports? Where do they go?

2. **Price Advantage**

Goods and services may also be cheaper in another country. This encourages businesses to **import** them from another country, rather than buying/producing them in their own country, because they can make more **profit**.

For instance, a pair of shoes that costs US$10 to produce in the USA might cost US$3 to produce in China. This is because labour, land and materials are usually cheaper in China. Even if it costs US$3 to transport each pair of shoes to the USA, it is still US$4 cheaper to produce them in China and transport them, rather than make them in the USA.
3. Trade Specialisation

Many countries specialise in producing large amounts of a limited number of goods and services.

- Some countries can produce the goods or services that other countries lack. Saudi Arabia can produce a lot of oil - which most other countries can’t do - so the country specialises in oil production.

- Some countries can produce goods or services more cheaply than other countries. Thailand can produce clothes much more cheaply than the UK, so Thailand produces many more clothes than the UK.

- Some countries can produce better goods or services than others because they have better technology, more skilled workers, or better quality natural resources. For instance, France produces good wine. This is because of the quality of the soil, the climate, and their expertise.

**Groupwork**

1. What trade advantages does Burma, or your community, have?

**Pairwork**

2. You are members of the Trade Commission in a democratic Burma. Make a list of five goods that Burma should specialise in producing and exporting to other countries. What strategies can you recommend to increase exports for these goods? Present your ideas to the class.

**Balance of Payments (Balance of Trade)**

A perfect balance of payments: money spent on imports = money spent on exports

Most countries don’t have a balance of payments. Many countries spend more money on imports than they earn from exports. This is called a trade deficit. Countries that earn more money from exports than they spend on imports have a trade surplus.

**On Your Own**

3. Your teacher will draw a table on the board showing the value of imports and exports from a group of countries in 2005. Copy the table into your books and work out the value of the trade deficit or trade surplus for each country.
Trade Deficits

The United States of America has the largest trade deficit in the world. In 2005 it totalled $726 billion. Therefore the USA bought $726 billion more goods and services from other countries than it sold to them. Compare that figure with the trade deficits in 2005 of other countries below:

<table>
<thead>
<tr>
<th>Country</th>
<th>Trade Deficit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spain</td>
<td>$-64.6 billion</td>
</tr>
<tr>
<td>Australia</td>
<td>$-41.0 billion</td>
</tr>
<tr>
<td>UK</td>
<td>$-38.4 billion</td>
</tr>
<tr>
<td>France</td>
<td>$-30.1 billion</td>
</tr>
<tr>
<td>Vietnam</td>
<td>$-1.7 billion</td>
</tr>
<tr>
<td>India</td>
<td>$-13.2 billion</td>
</tr>
<tr>
<td>Pakistan</td>
<td>$-1.43 billion</td>
</tr>
<tr>
<td>Thailand</td>
<td>$-8.6 billion</td>
</tr>
<tr>
<td>Burma</td>
<td>$-215 million</td>
</tr>
</tbody>
</table>

By far the USA’s biggest trade partner is China, and the trade deficit between the US and China in 2005 was over $200 billion. So the US bought $200 billion more goods and services from China than it sold to China. This is despite the fact that the Chinese population (1.3 billion) is over four times larger than the US population (300 million).

**Groupwork**

1. What does the USA buy from China? What does China buy from the USA? Why?

Look at the table below which shows the main kinds of goods that the two countries buy from each other. What differences do you notice between them? What does this tell you about the economic differences between the two countries. Your teacher will give you some information to help you. Prepare your ideas in your group for a class discussion.

To help you, you might want to consider issues such as:

<table>
<thead>
<tr>
<th>Labour</th>
<th>Technology</th>
<th>Wealth</th>
<th>Production/Consumption Needs</th>
</tr>
</thead>
</table>

**Discussion**

2. Why is the USA’s trade deficit with China so huge?
Trade deficits: bad or good?

1. Why do you think that a large trade deficit might create the following problems? In pairs, think of possible reasons for a class discussion.

- an increase in unemployment in the country
- loss of independence for the country
- dependence on loans from foreign countries

Despite a huge trade deficit, the US economy continues to grow successfully. Some economists argue that this is because of the large amount of foreign investment that is flowing into the country, and the huge amount of investment that US companies are making in foreign markets (like China). This means that economic growth in China, and other foreign markets, makes money for US companies. Therefore, they argue that the deficit is not a problem as long as ‘inward’ and ‘outward’ investment continue to grow as well.

Many economists now agree that a trade deficit is not necessarily ‘good’ or ‘bad’, but depends on the particular economic circumstances of a country.

2. You work for the Burmese Ministry of Trade in a democratic Burma. The government has recently announced a new plan to encourage the import of important goods and services from other countries, particularly things that Burma cannot produce.

The Prime Minister has asked you to draw up a list of five goods and/or services that you consider important, and that Burma has difficulty producing.

Present your work to the class and explain to the class why your group has chosen these items.

Trade Protectionism: Tariffs and Subsidies

Many countries are afraid of a truly free international market. They fear that competition from other countries will damage their own economy. Therefore, they try to protect their economy. This is called Trade Protectionism.

3. How might a country try to protect its economy from other countries?

1. Import Tariffs

One way in which governments try to protect their economies from cheaper foreign exports is by imposing ‘import tariffs’. This is a tax placed upon a good or a service when it is imported into the country. The government demands a percentage of the value of the import.
1. Why do you think import tariffs might be useful for developing countries?

Import tariffs and developing countries
Import tariffs are often seen as a good way to protect the economies of developing (poor) countries. In a free market, developing countries often find it difficult to compete against developed (rich) countries who have more economic power and usually better technology, or other developing countries who are importing very cheap goods into their country. By using import tariffs, developing countries can increase the price of goods and services imported from another country. This protects the local market from cheap foreign goods, so local people can grow their businesses successfully until they are strong enough to compete against foreign markets.

Japan and South Korea built successful car industries in the 1960’s and 1970’s by using tariffs to protect their companies from British and American car makers, who dominated the global market. China’s huge growth in the 1990’s was helped by average import tariffs of 30%. Five of the six fastest growing economies between 1950-1973 (Japan, Italy, Austria, Finland and France) all had high import tariffs.

However, developed countries and organisations such as the International Monetary Fund (IMF) and the World Trade Organisation (WTO) often put pressure on developing countries to remove or reduce tariffs. They say that it will help the economies of developing countries to grow. They point to the success of East Asian economies in the last 20 years, where import tariffs have fallen from about 30% to about 10%. The graph above shows that IMF and WTO’s pressure has been successful - levels of import tariffs in developing countries have fallen slowly for many years.

However, other people argue that the economic situation has become worse for many developing countries who have reduced or removed import tariffs. In Senegal (Africa), after trade liberalisation in 1985, one third of the people working in the manufacturing sector lost their jobs. In Uganda (Africa), a huge rise in imports greatly decreased the demand for locally produced goods. In Mexico (South America), economic growth has slowed since the government liberalised trade.

2. Multiple choice. Complete the exercise that your teacher gives you.

3. Comprehension. Answer the following questions.
1. Why do some people consider import tariffs good for developing countries?
2. What do Japan, South Korea, China, Italy, Austria, Finland and France have in common?
3. Why do the IMF and the WTO push for import tariffs to be removed?
4. What happened when trade was liberalised in Senegal?

4. You work for the Economics Ministry of a democratic Burma. Do you think the country should use import tariffs? Why/Why not? If you think Burma should use tariffs, which kinds goods should be affected by them?
2. Subsidies

Another way that governments try to protect their economies is by using **subsidies**. A subsidy is money paid by the government to producers in that country to encourage them to produce particular goods or services, and help keep their prices low so that they can compete in international markets. Subsidies can be used in any economic sector, but are most common in agriculture. For example, the European Union (EU) has a system called the Common Agricultural Policy (CAP). In 2005, through the CAP, 43 billion euros were paid to farmers in the EU for products such as sugar, milk, meat, cotton, tobacco, olive oil, fruit, vegetables and rice.

**Subsidies and developing countries**

Subsidies in developed countries are mostly designed to protect them from producers in developing countries. This is particularly true for agriculture. Agriculture is the most important economic sector for most developing countries. They can produce many agricultural products more cheaply than developed countries, as land and labour are cheaper. So, to protect their own producers, developed countries pay their farmers so that they can reduce the price of producing certain products. Subsidies and import tariffs mean that it can be very difficult for developing countries to sell certain agricultural products to developed countries for a competitive price. However, some developing countries also use subsidies to protect their producers, usually from producers in other developing countries.

---

**Discussion**

1. Why does the EU pays so much money to its farmers? Who is the EU protecting the farmers from? Who else produces sugar, milk, cotton, rice, etc?

2. True or false.
   1. Developed countries use subsidies to protect the economies of developing countries.
   2. Subsidies and import tariffs in developed countries help developing countries to sell products to them.
   3. Subsidies help farmers in developed countries to lower the prices of their products.
   4. Developing countries don’t use subsidies to protect their producers.

---

**Discussion**

3. Have a look at the picture on the right. What do you think is its message?

Do you think it is right that rich countries protect their economies using subsidies? Why/Why not?

Subsidies have been criticised not only because they harm farmers in developing countries. Recent reports in the US and Europe have shown that most subsidy money goes to a small number of large farms owned by large companies. Small farmers receive little. Also, subsidies raise the price of food. Some people estimate that EU subsidies make food in Europe 25% more expensive.
EU sugar subsidies and the developing world

Until February 2006, the EU paid European sugar producers and exporters around 1.5 billion euros each year in subsidies as part of the CAP. High import tariffs made it hard for developing countries to import sugar into the EU. This meant that the price of sugar within the EU was 3 times higher than the average in other international markets. At the same time, EU farmers were producing 5 million tonnes too much sugar each year. This extra sugar was dumped on international markets at very low prices, making the EU the world’s second largest sugar exporter. For every 1 euro worth of sugar exported, the EU spent 3.30 euros in subsidies.

There are many poor farmers in developing countries growing sugar on small plots of land. The EU’s policies of high import tariffs and subsidies made it almost impossible for them to sell their sugar in most European countries. The EU also forced down the price of world sugar by dumping millions of tonnes of surplus sugar onto international markets at reduced prices.

In 2004, Australia, Brazil and Thailand complained about EU sugar policy to the World Trade Organisation (WTO). The WTO investigated the EU and, in 2005, announced that their actions were against world trade rules. In February 2006 the EU agreed to cut subsidies to its sugar exporters by 36%. It also agreed to cut sugar production by 13.6%. The price of sugar exported from the EU will now be similar to the price of sugar exported from developing countries. Developing countries will be able to compete equally in international sugar markets.

Pairwork

1. Comprehension. Answer the questions that your teacher gives you about the text above.

Groupwork

2. You are members of Burma’s Economic Strategy Committee in a democratic Burma. You must choose 5 goods that Burma produces that you want to protect with import tariffs and subsidies. Prepare a five-minute presentation for the class, explaining why you have chosen those 5 goods.
Free Trade

‘Free Trade’ means trade without barriers (e.g., no trade protection). Barriers include tariffs, subsidies, quotas or other trade policies that might give producers and exporters in one country advantages over producers and exporters in other countries. Have a look at the following story:

**Fair free trade?**

Zadie is an orange farmer in Mazalia. She produces 10,000 oranges a year. It costs her $0.12 to grow each orange and she sells each one for $0.20. Her total profits are therefore $800 per year ($0.08 x 10,000).

The world price for oranges is $0.10 per orange, but the tariff for importing oranges into Mazalia from another country is $0.20. This means that imported oranges cost $0.30 ($0.10 + $0.20), but Zadie’s oranges sell for $0.20. The tariff protects her from cheaper oranges produced in other countries.

Now imagine that the import tariff is removed. Zadie’s business in now in trouble. The world price of oranges ($0.10) is below her production costs ($0.12). She will find it almost impossible to sell her oranges, and her $800 profit is gone.

On the other hand, the people in Mazalia who are buying and eating the oranges (the consumers) are now more than $800 better off. Previously, consumers had purchased 20 oranges at $0.20 each, for a total of $4. After the tariff is removed, 20 oranges can be purchased for $2. But even this underestimates how much better off consumers are because consumers will buy more than 20 oranges now that oranges cost half the price.

**Groupwork**

1. What do you think is fairer?
   a) Import tariffs are used to protect Zadie from orange producers from other countries, but consumers in Mazalia have to pay high prices for their oranges.
   b) Import tariffs are removed so that the price of oranges in Mazalia decreases a lot, but Zadie can no longer sell her oranges.

As a group, decide which statement you support (‘a’ or ‘b’), and your reasons why. Present your argument to the class.

The story above shows that it is difficult to say that free trade is necessarily a good, or a bad, idea. It is an advantage so some people and a disadvantage to others. In the world today there is a battle of ideas between people who support free trade, and those who support trade protection.

**On Your Own**

2. Write a short essay (about 200 words) giving your opinions about free trade and trade protection. The title of the essay is: ‘Free trade is the fairest form of international trade.’
Fair Trade

‘Fair trade’ is trade which encourages good labour standards, environmental protection and the fair distribution of the benefits of trade. Fair trade aims to help poor people involved in production in developing countries. These people often have little power, and are usually dependent on larger companies and/or governments to trade internationally. These companies and/or governments often exploit them - they don’t give them a fair price for their labour/products, the working conditions are bad, and the workers have very little opportunity to escape the system. Fair trade also ensures that women’s work is properly valued and rewarded.

Fair trade helps poor people to become economically independent, and to get a fair price for their labour / products. Many fair trade organisation have been set up by NGOs and groups of poor people. In 2005, nearly US$1 billion of goods were traded through fair trade organisations.

Fair trade organisations are regularly inspected and certified. The largest inspection and certification body is the Fairtrade Labelling Organizations International (FLO). It inspects and certifies producer organisations in more than 50 countries in Africa, Asia and Latin America. Certified producers can use the official Fair Trade logo on their products.

Fairer farming in Thailand

Kanya is a rice farmer in north-eastern Thailand. She is a member of a fair trade cooperative called Rice Fund Surin which was founded by 45 farmers in her region.

Before she joined the fair trade cooperative, she was able to earn about 20,000 baht per year from growing rice on all of her 7.2 acres of land. This was not enough to support all the needs of her family. Since she joined the cooperative she receives a much better price for her rice by selling internationally through the fair trade system. This means she can afford to grow less rice, and can use the extra land to grow peanuts, fruits and vegetables, which she sells in the local market. Now her annual income is 43,000 baht. She can even save around 4,500 baht per year, which she is using to send her two daughters to high school and plan for the future.

Previously, in her region, many families were forced to go to the big cities in Thailand during the dry seasons to earn extra money. Now, however, because of Fair Trade, they can earn enough money to remain in their village all year round.

1. Memory game. How much can you remember about ‘Fair Trade’?

2. In pairs, write down two questions about Kanya’s story above. Swap questions with another pair and answer their questions.

3. Your community wants to join a fair trade organisation. Prepare a short presentation for the organisation, showing why and how fair trade would useful in your community. What kinds of goods/products would you want to include? What kinds of people would benefit from this?
17. Trade Blocs

A trade bloc is a group of countries that have agreed to integrate their economies. This makes it easier for them to trade with each other, and sometimes more difficult for countries outside of the bloc to trade with them. As a bloc, these countries have more economic power in the world. This can help them to negotiate more favourable trade conditions with other countries, blocs and world economic institutions like the WTO. There are different kinds of trade blocs with different economic and political goals. These include free trade areas, customs unions, single markets, and economic and monetary unions.

1. Can you name any trade blocs in the world today. Do you know anything about them? Do you know who their members are?

We will look at four different trade blocs here: ASEAN, the EU, ECOWAS and Mercosur.

1. The Association of South East Asian Nations (ASEAN)

ASEAN is a regional political and economic organisation of 10 countries in Southeast Asia. Its members are Indonesia, Malaysia, the Philippines, Brunei, Singapore, Thailand, Vietnam, Laos, and Myanmar. ASEAN’s main goal is to increase economic growth but it also focuses on social progress, cultural development and the promotion of regional peace. ASEAN was formed in 1967 by Indonesia, Malaysia, the Philippines, Singapore, and Thailand. These countries were worried about the growth of communism in Vietnam, and growing conflict in the region. Today, one of ASEAN’s most important roles is to balance the influence of China and India, the region’s most powerful countries.

The total population for all member countries is about 560 million, and GDP is US2.75 trillion. In the late 1990’s, ASEAN started developing closer economic links with other countries in the region. For example, ASEAN Plus Three was created in 1999 to improve existing links with China, Japan, and South Korea. This was quickly followed by the even larger East Asia Summit, which included these countries as well as India, Australia, and New Zealand. One of the key reasons for ASEAN’s creation was to balance the influence of India and China, Asia’s emerging superpowers.

2. Mini-Quiz. In groups, create a quiz with three questions about the text above. Swap your quiz with another group. Can you answer their questions?

3. What do you know about ASEAN’s relationship with Burma? ASEAN has been criticised for its cooperation with Burma. Why do you think this is? What arguments do you think ASEAN uses to defend itself against this criticism?

Brainstorm

Groupwork

Discussion
1. True or false. Complete the exercise that your teacher gives you.

There are many disagreements about the best way to bring about change in Burma using economics. Some people prefer economic engagement. They say that economic integration and growth will lead to positive change in Burma, even though it might be a slow process. Other people strongly disagree. They say that economic isolation is the only solution. They believe that sanctions will force the government to accept democracy. This means, unfortunately, that there is no united international approach to Burma’s problems.

2. What do you think is the best way to bring about change in Burma using economics?

On Your Own

Discussion

ASEAN, Burma and constructive engagement

In 1997 ASEAN admitted Burma as a member. Many governments and people around the world criticized ASEAN for this. They said that ASEAN membership would give the unelected military dictatorship political and economic support, and legitimacy. ASEAN replied that it supported a policy of “constructive engagement” between members. For ASEAN, constructive engagement means:

1. Economic development is more important than political development.
2. A close relationship is a better way to influence neighbors than opposition.
3. ASEAN should not interfere with the domestic politics of member countries.
4. Working with neighbouring governments encourages regional security and stability.

The policy of constructive engagement conflicts with the EU and US approach of economic sanctions and diplomatic pressure.

Ten years have passed since Burma joined ASEAN and the country has neither opened up nor democratised. Human rights abuses are still common, over 1000 political prisoners remain in jail, and the military continues its brutal attacks on civilians in insurgency areas around the country.

Burma was to become the next Chair of ASEAN in 2006. International protests led by the US, the EU and non-governmental organizations put a lot of pressure on ASEAN to prevent this from happening. Eventually, Burma gave up the position, preventing further embarrassing conflict between ASEAN and the international community. However, the question remains about constructive engagement: who wins and who loses?

A 1993 cartoon critical of the ASEAN-Burma relationship
2. The European Union

The European Union (EU) is an economic and political union of 27 member states. It was originally founded in 1957 as the European Economic Community (EEC). The EU has a population of 494 million people, and a GDP of about US$15 trillion. It has a single currency called the euro which is used by 13 member states.

The EU’s activities cover many areas of policy including economics, foreign affairs, defence and health.

Citizens of EU member states are also EU citizens: they directly elect the European Parliament, once every five years. The parliament has 785 members (MEPs). The larger the population of each member state, the more MEPs they have.

The EU is a ‘single market’. This means that there is free movement of land ownership, labour, and capital. EU citizens can freely live, travel, work, own property and invest in other member states (with some restrictions on new members). There are no passport controls or customs checks at most internal borders. The EU is part of a free trade zone called the European Economic Area (EEA) which includes three non-members of the EU - Iceland, Liechtenstein and Norway.

The EU (and the EEC) has had to overcome many obstacles in its history. Europe is a continent with many languages and cultures. Historically it has also been an area of conflict - both World War I and World War II started in Europe. There is much disagreement in most countries about how much they should integrate with the Union. Governments and citizens are worried about losing their independence. The UK, Denmark and Sweden refused to join the euro because they fear they will lose control over their economies.

Admitting new countries to the EU is also a controversial issue. Bulgaria and Romania, in Eastern Europe, joined in January 2007. Their membership was delayed for a number of years due to concerns over their economic and political situation. Despite being members, their citizens cannot move freely through other member states. This is because Western European member states fear that, if there is no control, huge numbers of Eastern Europeans will migrate to Western Europe.

1. Comprehension. Answer the following questions:
   a. How many member states are there in the EU?
   b. What areas of policy do the EU’s activities cover?
   c. Why did the UK, Denmark and Sweden refuse to join the euro?
   d. Why aren’t Bulgarian and Romanian citizens allowed to move freely within the EU?
3. Economic Community of West African States (ECOWAS)

ECOWAS, founded in 1975, is a regional group of fifteen West African countries. It aims to encourage economic integration and improve the economic stability of member states. It is one of twelve regional trade blocs of the larger African Economic Community.

Member states of ECOWAS are Benin, Burkina Faso, Cape Verde, Cote d’Ivoire, The Gambia, Ghana, Guinea, Guinea Bissau, Liberia, Mali, Niger, Nigeria, Senegal, Sierra Leone and Togo.

ECOWAS has a population of about 252 million people, and a GDP of US$343 billion. It was originally founded to become a single market with a single currency. However, progress has been very slow, mainly because of the many civil wars and political problems that have occurred in the region. However, the proposed single currency, the eco is planned for introduction in 2009. Some countries have agreements which allow citizens to move freely across borders using ECOWAS passports or travel certificates. ECOWAS also has a peacekeeping force, ECOMOG, which has intervened in regional crises such as the civil wars in Liberia, Sierra Leone and Guinea Bissau.

4. Mercosur

Mercosur is a Regional Trade Agreement (RTA) between five South American countries: Brazil, Argentina, Uruguay, Venezuela, and Paraguay. It was founded in 1991. Its purpose is to encourage free trade and the easy movement of goods, peoples, and currency. Mercosur has a population of 263 million and a GDP of US$2.42 trillion.

Mercosur is partly a response to South American concerns about the economic power of trade blocs like the EU and the North American Free Trade Area (NAFTA). In 2004, Mercosur signed a cooperation agreement with another regional bloc in South America, the Andean Community, which consists of Bolivia, Chile, Colombia, Ecuador and Peru.

Mercosur has been weakened by the Argentine economic crisis of 2001, and several trade disputes between members.
18. Economic Globalisation

Brainstorm

1. What do you think economic globalisation means? What is it about?

In economics, globalisation means the movement of goods, services, money, technology, information and people between countries. It means the economic unification of the world. Nations begin to see themselves as members of one big economy, rather than many separate economies. They become increasingly dependent on each other.

Pairwork

2. Think about the things that you can see around you - clothes, shoes, pens, etc. Do you know where they were made? If you are not sure, see if you can find a label which tells you. Write a list and share it with the class.

Economic globalisation is partly the result of the development of international trade over many hundreds of years. More recently, it has been helped by the following four developments:

1. The internet and modern communication networks

The internet makes it possible for all computers in the world to be connected together. It is an extraordinary communication tool, a massive information resource, and a huge global market. On the internet there is no distance; it is almost as if the whole world is living in one computer!

**eBay: an internet miracle**

eBay is an internet auction company which helps people to buy and sell things over the internet. If someone wants to sell something on eBay, they publish an advertisement for it on the eBay website from their computer. This advertisement can be seen by everyone who visits the eBay website. If someone wants to buy the item, they can bid for it from their computer. Whoever offers the highest amount of money wins the auction. The winning bidder usually pays with electronic money. eBay makes money by asking sellers to pay a small amount of money to place their advertisement, and also by taking a small percentage of the amount for which the item was sold.

eBay was founded in California, USA, in 1995 by Pierre Omidyar when he was 28 years old. At that time he was the only employee. Today the company has about 11,600 employees and operates websites in more than 30 countries. In 2007 almost US$60 billion of goods were sold through eBay websites and the site had 233 million registered users worldwide. For some people, buying and selling items on eBay has become their full-time job. About 100 million items are listed on eBay websites at any one time, including old furniture, clothes, toys, houses, cars, computers, sports equipment, books, music and many other things. The most expensive thing to be sold so far on eBay is a private jet airplane for US$4.9 million.

Pairwork

3. True or false. Complete the exercise that your teacher gives you.
2. Improvements in international transport networks

Air Travel
In the last thirty years there has been a huge increase in air travel. In 1975 about 40 million passengers per year travelled by airplane. By 2001 the number reached 1.6 billion. The relative cost of air travel has dropped over time, meaning that many more people can afford it. Over 30 million tonnes of goods are transported by air every year. This growth has brought world populations closer together.

3. Governments relaxing control over their economies

China
In the last 15 years, China has changed from an isolated economy, planned and controlled by the government, into one of the world’s fastest growing markets. The relaxation of economic laws has enabled Chinese and foreign companies to take advantage of China’s cheap labour and huge population. China is now the sixth largest economy in the world (soon expected to enter the top four), and consumes more wood, steel, coal, meat and grain than any other country. It is the world’s 5th largest exporter. Shanghai - one of the world’s fastest-growing cities.

4. Technology to enable unskilled workers to work in modern production

Nokia Factory, Dongguan, China
Nokia is an international company that makes mobile phones. One of its biggest factories is in Dongguan city in China. Most of the 4 million factory workers in Dongguan are unskilled migrants from rural areas across China. 72% of the migrants are young women, many of whom return home after a few years to get married.

Modern production techniques mean that Nokia can employ unskilled workers to produce high technology products. They work on production lines, assembling different parts of the mobile phones, and putting them into boxes. The workers’ tasks are simple and repetitive. The complicated parts of the phones are made in other factories, using computers, robots and other machines.

Dongguan has many advantages for Nokia. Factory land and labour are cheap and plentiful.

Groupwork Quiz. Read the information above. Try to remember as much as possible.
Globalisation has helped the rise of multinational corporations - huge businesses that operate in many countries. Of the 100 largest economies in the world, 37 belong to corporations, while 63 are countries. The world’s top 200 corporations control 29% of world economic activity.

In 2005, the world’s largest corporation was the US supermarket company Wal-Mart. Wal-Mart employs around 450,000 people in 2660 stores across 15 countries. In 2005, it sold US$312.5 billion of goods. This made it the 20th largest economy in the world, larger than the GDP of Norway, Saudi Arabia, Thailand and many other countries.

Despite its success, Wal-Mart is often criticised for the way it does business.

Brainstorm

1. What do you think might be the problems and benefits of having such large and powerful multinational corporations in the world?

Is economic globalisation good or bad?

The word ‘globalisation’ has become highly political in the past few years. In many countries in the world there are now ‘anti-globalisation’ movements. These movements often accuse governments, world economic institutions (the World Bank, IMF, & WTO) and multinational corporations of working together to control the world economy. They say that poor countries, and poor people, are being exploited for the benefit of the rich minority.

Anti-globalisation means ‘against’ globalisation. However, many people involved in these movements say that they are not against globalisation. They state that they are against injustice, the concentration of huge economic power in the hands of a small number of multinational corporations, and the exploitation of the poor.

So, it difficult to say that economic globalisation is either ‘good’ or ‘bad’. There are many kinds of globalisation, and it affects different people in different ways.

Groupwork

2. What do you think are the advantages and disadvantages of economic globalisation in the world today? You might want to consider: labour, labour rights, poverty, trade, democracy, national sovereignty, the environment, individual freedom, communication, choice of goods and services, etc.
Some advantages of economic globalisation

1. **Helps businesses to minimise labour costs**
   Some countries have much lower labour costs than others, so companies can move production to countries where labour is cheap. The US sportswear corporation Nike produces most of its goods in China, Indonesia, Vietnam and Thailand. They pay the workers much less than in the US, so they can produce their goods more cheaply. Nike does not need highly skilled workers, but they do need to employ a lot of people.

2. **Increases access to natural resources**
   Some countries do not have many natural resources (e.g. Singapore, Taiwan, Japan, Switzerland). Also, companies often require large quantities of a particular natural resource, which may not be available in one country. In a globalised economy it is easier for countries and companies to acquire natural resources from overseas. These include oil, gas, water, wood, metals, minerals and agricultural products.

3. **Helps businesses to exploit beneficial government policies**
   Some countries have lower taxes, cheaper energy and materials, and weaker environmental and labour laws than others. Multinational companies can take advantage of these by setting up operations in these countries.

4. **Helps businesses to minimise transport costs**
   If a company is able to set up operations in many countries, it can reduce transport costs because it is closer to the resources it needs and the people who want to buy its products.

5. **Helps poorer countries to use their labour force advantage**
   Poorer countries have one clear advantage - cheap labour. As globalisation increasingly unifies world economies, poorer countries are able to attract companies who are keen to reduce the labour costs of production. Examples include China, India, Thailand and Taiwan.

6. **Offers people more choice of goods and services**
   In some ways, globalisation has increased the range of goods and services available. It is now possible to buy similar goods and services in many markets around the world. The rise of the Internet has been particularly important in making this happen.

7. **Helps to spread information around the world**
   Cheap and widely available communication systems (TV, mobile telephones, internet, etc.) have helped to make information more accessible to individuals, businesses and governments.

**Groupwork**

1. **Memory game. Complete the exercise that your teacher gives you.**

**Discussion**

2. **Do you think economic globalisation has helped your community? How?**

---

The Coca-Cola Company is one of the best examples of how corporations have benefited from globalisation. Coke was invented in 1886 as a flu medicine in the US. About 9 glasses per day were sold that year. Now it is perhaps the most famous brand in the world. The company sells over 200 million cans and bottles of Coke each day in more than 200 countries. It most parts of the world it is almost impossible to spend a day without seeing the Coca-Cola brand. The company sells 400 other products worldwide including water, soft drinks, fruit drinks and energy drinks.
Some disadvantages of economic globalisation

While there are advantages to economic globalisation, it has also been strongly criticised.

1. Who is in control?
Some people argue that rich, powerful nations and corporations are controlling globalisation for their own benefit. They say that poorer nations are losing out because they have little influence in the world.

The poor feeding the rich?
The rise of economic globalisation is directly linked to increasing consumption in wealthy countries.

According to UN statistics, the 20% of the world’s population living in the richest countries consume:

- 58% of total energy
- 45% of all meat and fish
- 87% of the world’s vehicles
- 84% of all paper

By comparison, the 20% of the population living in the poorest countries consume:

- 4% of total energy
- 5% of all meat and fish
- 1% of the world’s vehicles
- 1.1% of all paper

A lot of the natural resources and labour for this consumption come from poor countries. However, it is often multinational corporations and government elites who control natural resources in these countries, not the poor people. The poor people provide the labour, but often receive very low wages and have few labour rights. Therefore, although the poor people are an important part of this growth, they rarely receive a fair share of the benefits.

In many countries in the developing world, the poor are forced from their land so that multinational corporations can benefit from the natural resources that the land contains. The government of these countries are usually poor and often contain a lot of corruption. They are usually more interested in the money they will receive than protecting the rights and livelihoods of their citizens.

Pairwork
1. Design and draw a graph (or two graphs) to show the different levels of consumption between the richest 20% and the poorest 20% of people in the world. What kind of graph will you use?
2. **Economic globalisation & human rights**

Natural resources and cheap labour are sometimes located in countries with bad human rights records and, in some cases, brutal regimes. However, in the search for scarce resources and cheap labour, companies and foreign governments often ignore these problems, or even use them to their advantage. There are many examples of dictatorships being tolerated, and sometimes supported, by other nations and businesses who say they uphold democracy, human rights and the rule of law, so that they can benefit from these resources.

**The Yadana Gas Pipeline**

Total is a French multinational energy corporation, employing 110,000 people in 130 countries. Alongside US multinational Unocal, Total is a key partner in the Yadana Gas Pipeline, the single largest foreign investment project in Burma (US$1 billion). Total paid the Burmese Army to provide security for the pipeline. Abuses such as extra-judicial killings, torture, rape and extortion by pipeline security forces have dramatically increased since the Yadana Project was started.

Other human rights violations linked to the Yadana project include forced labour; forced portering, where villagers are made to carry arms and supplies for soldiers patrolling the pipeline route; and forced relocation of entire villages to clear the way for the pipeline. The arrival of many soldiers to the previously isolated region has also caused an increase in illegal hunting and logging. Villagers receive no benefits from the pipeline.

1. Comprehension. Complete the questions that your teacher gives you.

2. What do you think are the best ways of trying to stop businesses and governments benefiting from human rights abuses in other countries?
3. **Economic globalisation & the environment**

Some critics of economic globalisation are concerned about environmental effects. Some companies deliberately set up factories in countries with weak environmental laws. This helps them to cut costs and raise profits. The host countries may not want to change their laws as they are afraid that the companies will leave. Many people are concerned that poor countries are selling their natural resources to richer countries and multinational corporations, causing pollution and environmental damage.

---

**Soya beans and the Amazon rainforest**

Soya beans are used to make many different kinds of food, including tofu, soya milk, soya sauce and animal food. In the last ten years, demand for soya beans has increased, particularly in China and Europe. Due to increased demand, the price of soya beans has risen quickly, so farmers are keen to grow them.

In 1997, scientists in Brazil, South America, developed a new variety of soya bean which is able to grow in the harsh Brazilian climate. Since 1999, soya production has risen 15% per year in Brazil. Many multinational food corporations are now involved in soya bean production there.

Although this is good for Brazilian farmers, there is one serious problem. In order to find enough land to grow the soya beans, farmers are cutting down huge areas of Brazil’s Amazon rainforest. The deforestation of the Amazon has been happening for many years, but the recent introduction of soya beans has increased it dramatically. The Amazon is the world’s largest rainforest. It covers 40% of the land of South America, and is home to many rare species of animals and plants. The trees and plants produce around 20% of the world’s oxygen. Many of the plants have been used to create medicines.

It is estimated that about 32,000 square kilometres of the forest are cut down each year (about the same size as Karen State). At the present rate, the rainforest will be completely destroyed in about fifty years. About 137 species of animals, plants and insects are destroyed every day.

---

**Pairwork**

1. Comprehension. Think of three comprehension questions about the text above. Swap them with another pair, and answer their questions.

**Discussion**

2. Do you know how economic globalisation is affecting the environment in Burma? What about multinational companies that are involved in mining, deforestation or oil and gas?
4. Economic globalisation & land rights
When an area is considered valuable in terms of natural resources, it can be difficult for the people who live there to protect their land rights. There are many cases in which national governments and multinational companies work together to deprive communities of their rightful land. This is a particular problem in countries where the laws are weak and corruption is widespread. Local people tend to be little more than a source of cheap labour, thereby participating in the destruction of their environment for little or no benefit.

Freeport Mine, West Papua, Indonesia

The largest mining company in West Papua is the US based Freeport McMoran Copper and Gold Inc. The company came to West Papua in 1967. Freeport is now the world’s largest gold mine and third largest copper mine. The mine is protected by hundreds of Indonesian soldiers and policemen, largely paid for by the mining company. The land on which the mine is built is inhabited by the Amungme people. However, their land rights have been ignored by the mining company and the Indonesian government.

The construction of the mine needed moving millions of tons of earth from the top of the Jayawijaya mountain near the mine. The Amungme people are very upset about this. In their beliefs, Jayawijaya mountain is the head of their sacred mother. To them Freeport has already cut off their mother’s head by reducing the top of the mountain, and it is now digging into her heart. Without the permission of the Amungme people, large areas of rainforest and mangrove were cleared to establish the mine and the nearby port. Important rivers are being polluted with mining byproducts, contaminating river animals and coral reefs. The large quantity of sand produced by the mine has caused severe flooding and erosion.

Since 1977 the Amungme have tried to resist the destruction caused by the mine. Demonstrations have often been violently crushed by Indonesian police and soldiers. Resistance leaders have been imprisoned and tortured. However, there have been some victories for the Amungme. In 1996, after large demonstrations, the Freeport company agreed to create a landowners’ trust to help people whose land has been affected by the mine. The rules of agreement and value of the trust are still not agreed. Violent demonstrations continue today.

West Papuan demonstrators clash with police

Discussion
2. What about land rights in Burma? What happens when the government, or a big company, wants to use natural resources in a region?
5. Economic globalisation & national sovereignty

Sovereignty means the independence and supreme authority of a nation (government and people) over its own territory. With economic globalisation, national economies are becoming increasingly unified into the global economy. National governments now have less control over their economies because much of their economic activity happens outside their territory and jurisdiction. They can still make national economic laws, but these have limited influence. The World Bank, the WTO and the IMF are able to make decisions which override national economic laws. Increasingly powerful multinational corporations, in search of more profits, natural resources and customers, are expanding all over the world. Many poorer countries find their economies dominated by these corporations, often with the agreement of their governments. So, human rights and national sovereignty become threatened by big business.

Colombia: a victim of economic globalisation?

Colombia is a country of 40 million people in South America. For much of its recent history Colombia has suffered from civil wars and military coups. In the last forty years, it has been known for massive illegal cocaine production. However, Colombia also has rich natural resources including petroleum, natural gas, coal, iron ore, nickel, gold, copper, emeralds and forests. In the last few years, increasing numbers of multinational corporations, particularly from the US, have come to Colombia to exploit these resources.

In 1998, the US government launched ‘Plan Colombia’ which continues today. This plan consists of military and economic aid which is supposed to help the Colombian government eradicate drug production and terrorist groups, and create economic growth. However, the plan has been criticised by many people as an excuse for US control of the Colombian economy. They say that US multinational corporations now have unrestrained access to Colombia’s natural resources in areas controlled by the Colombian government. The corporations are also accused of using paramilitary groups to protect their interests and crush opposition.

Many human rights abuses have been recorded. Occidental Petroleum was accused of aiding the murder of civilians in the village of Santo Domingo in 1998. In 2001, both the Coca-Cola bottling company and the US mining company Drummond were accused of hiring paramilitaries to kill senior labour union members. Three million people have been forcibly displaced since 1985 so that the natural resources in their areas can be exploited. Nevertheless, the multinational corporations continue to expand in Colombia with the assistance of the Colombian government.

On Your Own

1. Comprehension. Answer the questions that your teacher gives you.

Discussion

2. What about Burma’s national sovereignty? Has it been affected by economic globalisation? In what ways?
19. Review

CONGRATULATIONS! You have finished the module!

Below are some exercises that will help you to review the key topics in the module. How much can you do WITHOUT looking back through your book?

1. Draw an economic map for a good of your choice, showing production (including the four parts of production), distribution and consumption.

2. True or false.

a. Economics is about the things that people need and want.

b. Scarcity is when there is too much of a particular resource, good or service.

c. There are three parts of production: Capital, Labour and Enterprise.

d. GDP per person is the most accurate economic indicator of quality of life in a country.

e. In proportional taxation, everyone pays the same percentage of the money they earn.

f. Hyperinflation is when prices fall very fast.

g. In free trade, countries use many import tariffs and subsidies.

h. Economic globalisation means the unification of world economies.

3. Fill in the blanks with some of the key words in the box below.

a. ____________ is the number of people that want goods and services, and the amount that they want. ____________ is the amount of goods available.

b. A ______________ is when a group of workers get together to obtain, improve and protect their ____________ and working conditions.

c. A __________ is when a country imports a lot more than it exports.

d. In ___________ goods are exchanged directly. ___________ is not used.

e. Capital is the money and __________ needed for production.

Key words: labour rights inflation demand money globalisation subsidy trade deficit barter labour union tools consumption supply

4. Write an essay of about 200 words. You can choose one of these titles:

a. Oil is the world’s most important commodity.

b. Money is better than barter.

c. Economic globalisation is bad for poor countries.

d. Fair trade or free trade?
The Curriculum Project

This glossary is in alphabetical order. The meanings of words given relate to the context of this module. The words may have other meanings in other contexts.

**activist (noun):** a person who uses direct action to try to change things.

**allocation (noun):** sharing out.

**appropriation (noun):** to take something illegally and without payment.

**asset (noun):** an item of value.

**auction (noun):** a sale of property to the person who pays the most money.

**back-breaking (adj):** very difficult, physically exhausting.

**to bid (verb):** offer a price for something.

**bidder (noun):** a person who bids in an auction.

**boycott (noun):** a refusal to do something, or buy something, out of principle.

**byproduct (noun):** something produced in addition to the main product.

**Chair (noun):** position of leadership.

**cocaine (noun):** a drug made from the coca plant.

**to colonise (verb):** to take over, populate and rule an area of land.

**compensation (noun):** money given to someone who has suffered an injustice.

**to compete (verb):** to be in competition.

**to comply (verb):** to do what you are asked to do.

**to condemn (verb):** to say that something is wrong.

**condition (noun):** a requirement attached to something given.

**constitution (noun):** the basic principles and laws of a nation.

**to contaminate (verb):** to pollute.

**corruption (noun):** illegal use of power, or position, for personal benefit.

**to cultivate (verb):** to grow.

**coup (noun):** a taking of power by force, usually by the military.

**customs (noun):** the agency that administers tax (‘duty’) placed on goods crossing borders, and searches for and tries to prevent the smuggling of untaxed or illegal goods.

**debt (noun):** money that is owed.

**democratise (verb):** become more democratic.

**demonstration (noun):** a gathering of people who protest against something.

**development (noun):** advancement, improvement.

**discrimination (noun):** denying someone equal treatment on the basis of age, skin colour, nationality, religion, gender, etc.

**dispute (noun):** argument.

**domestic (adj):** home, as in country.

**to dominate (verb):** to have a lot of control over.

**drastic (adj):** very severe and sudden.

**to dump (verb):** to get rid of unwanted things.

**elite (noun):** privileged group of people, often in positions of power and influence.

**to eradicate (verb):** to get rid of, destroy.

**essential (adj):** absolutely necessary.

**to expand (verb):** to grow, get bigger.

**exploitation (noun):** to make use of someone’s labour unfairly, sometimes through force.

**extrajudicial (adj):** not authorised by law.

**fake (adj):** not real, not original, not authentic.

**to fire (verb):** to dismiss someone from their job.

**fixed exchange rates:** a system where the exchange rates of the currencies of a group of countries are fixed so that they do not change. This is usually done to increase economic stability in a region.

**formation (noun):** creation.

**to found (verb):** to start, create.

**garage (noun):** a small building (usually one room) used for storage, or in which a car is parked. Some people use this space for a ‘home-office’.

**grant (noun):** money given to support an individual or a country.

**gross (adj):** total, whole.

**income (noun):** the money that people receive from their salary and other investments.

**indicator (noun):** a value/statistic which shows the health of an economy.

**inequality (noun):** not being equal.

**to inspire (verb):** to give someone hope and the desire to try to do something.

**to integrate (verb):** to join together.

**intensive agriculture (adj):** production of a lot of food from a small area of land using farm machinery and chemical fertilisers.

**interest (noun):** fee paid (usually every month) when you borrow money.

**to interfere (verb):** to get involved in something to try to influence it.

**to intervene (verb):** to get involved in.

**isolation (noun):** being cut off or separated from others.

**jurisdiction (noun):** the limits in which law or authority can be used.

**landless (adjective):** without land.

**to lay off (verb):** when an employer tells an employee to leave their job.
Glossary (cont’d)

legitimacy (noun): legal status, recognition.
to liberalise (verb): to make more free, reduce restrictions.
liberalisation (noun): making more free, removing controls.
life expectancy (noun): the average amount of time that someone can expect to live.
literacy (noun): being able to read and write.
logging (noun): cutting down trees.
mangrove (noun): a species of trees that lives near water, often in swamps.
to maximise (verb): to make as big as possible.
to monitor (verb): to oversee, check.
to nationalise (verb): when the government takes ownership of private companies.
to negotiate (verb): to discuss in order to reach an agreement.
non-legitimate (adj): not lawful.
to obtain (verb): to get, acquire.
to occupy (verb): to enter and take control of a place.
opposition (noun): resistance, disagreement.
to override (verb): to dominate, have priority.
paramilitary (noun, adj): a semi-official or auxiliary military force.
pension (noun): income paid to people after they retire, by governments or from private funds.
plentiful (adj): available in large quantities.
poverty (noun): the state of being poor.
predictably (adverb): in a way that people can tell what is going to happen.
product (noun): anything that is produced.
to protest (verb): to argue against, object.
publicity (noun): information about something in the news/media.
pus (noun): yellow liquid that comes out of a wound or sore.
to rank (verb): to put in order.
relative (adj): considered in relation to something else, proportionate.
to relax (verb): to make less strict.
repetitive (adj): repeated many times.
resource (noun): store, supply.
restriction (noun): limitation.
rural (adj): countryside (opposite of ‘urban’).
sanctions (noun): cutting of economic links to a country.
sector (noun): a part of the economy.
to segregate (verb): to divide.
self-sufficient (adj): not dependent on anyone else.
severely (adverb): badly.
to shrink (verb): to get smaller.
slave (noun): a person who is owned by another person, and usually used for labour.
slum (noun): an overcrowded, poor part of a town or city with bad housing.
to specialise: to focus on a small number of tasks.
specialisation (noun): focusing on a small number of tasks which one becomes very good at.
subsitute (adj): replacement, a
supreme (adj): highest, most powerful.
surplus (noun): extra.
to survive (verb): to stay alive.
technique (noun): a way of doing something.
tear gas: gas that stings your eyes, used by police to break up crowds.
territory (noun): geographic area claimed under a particular law or authority.
totalitarian (adj): the state having total control.
transparent (adj): free from deceit, clear.
unification (noun): joining together.
unique (adj): different from all the others.
unprecedented (adj): something which has never happened before.
unrestrained (adj): without any limitation, free.
vioiation (noun): an action against the law.
wages (noun): salary, income, pay.
